# National Interagency Coordination Center <br> Incident Management Situation Report <br> Wednesday, September 12, 2018 - 0530 MT <br> National Preparedness Level 3 

National Fire Activity
Initial Attack Activity:
New large incidents:
Large fires contained:
Uncontained large fires:**
Area Command teams committed:
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:

Light (73 fires)
2
2
25
0 0 5 10

Nationally, there are 59 large fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

One RC-26 aircraft with Distributed Real-Time Infrared (DRTI) capability and support personnel from the 141st Air Refueling Wing (Washington Air National Guard) has been deployed to Spokane, WA in support of wildland fire operations in the West.

Predictive Services Discussion: Hurricane Florence will begin to make its approach to the East Coast. Look for rain bands and winds to impact coastal areas near Cape Hatteras by afternoon. In the West, a cooler southwesterly flow will produce below normal temperatures. However, critical fire weather conditions resulting from breezy winds and low humidity will be present across portions of the Great Basin and Wyoming. Areas of rain will be possible across the Pacific Northwest and the Northern Rockies, as the system moves west to east along the Canadian Border.

## Chainsaw Safety 1

Felling Safety Category

Recently, several accidents and near misses involving leakage of chainsaw fuel, vapor lock/tank pressurization, and fuel spray have occurred. Firefighters should remember that fuel leakage, vapor lock/tank pressurization, and potential fuel spray can occur at any time when utilizing chainsaws. Fuel can become pressurized in any container that does not automatically vent pressure and can spray out whenever the pressure is released rapidly.

For firefighters working near ignition sources, having fuel on your clothing or skin presents a significant hazard. Personal Protective Equipment, even flame-resistant clothing, does not provide protection when fuel-soaked PPE ignites. Fuel the saw at least 10 feet from any potential ignition source.

- Assume all gas powered equipment and fuel transport containers are pressurized! Treat them accordingly when opening, especially when near any potential ignition source.
- Chainsaw operators: Review reports associated with recent incidents (Rock Ridge Accident Investigation, Dry Creek Near Miss, Willow Peak Fire Burn Injury Rapid Lesson Sharing and others) to learn how to avoid similar occurrences. http://www.wildfirelessons.net/home
- Chainsaw operators: Watch this short safety video for information on preventing fuel leakage, identification of potential vapor lock/tank pressurization, mitigation measures for vapor lock/tank pressurization, and reporting procedures for future occurrences. https://www.youtube.com/watch?v=RG9I7YkBSOg
- Firefighters report future occurrences of vapor lock/tank pressurization, fuel spray, and fuel leakage through the Safenet System - even if no one is injured! Specific information (make/model/serial number of chainsaw, ambient air temperature, elevation, and fuel used) should be included in Safenet submissions so that further evaluation of potential safety issues can occur. http://safenet.nifc.gov/
