# National Interagency Coordination Center <br> Incident Management Situation Report <br> Friday, October 5, 2018-0530 MT <br> National Preparedness Level 1 

National Fire Activity
Initial Attack Activity:
New large incidents:
Large fires contained:
Uncontained large fires:**
Area Command teams committed:
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:

Nationally, there are 42 large fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

This will be the last daily Incident Management Situation Report. This report will post every Friday at 0800 Mountain Time unless significant activity occurs.

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.
***Additional wildfire information is available through the Geographic Areas at http://gacc.nifc.gov/

Predictive Service Discussion: A cold, wet trough of low pressure will move into the West during the weekend, bringing low elevation rain and high elevation snow. As this large trough persists through mid-week, temperatures will remain below average. One fire weather related concern will be along the West Coast across northern California, where northerly downslope winds will be strong at times. The drying conditions that downslope flow can produce may elevate fire weather concerns during the period. The Great Plains will be in an overall wet pattern as a frontal boundary remains stalled over the eastern Plains and the front's eastward progress is halted by the presence of a strong ridge of high pressure located over the East.

## ATV - Transport

Vehicles/Roads Category

## ATV Loading/Unloading

Loading/unloading of ATVs has resulted in serious injury and even death to employees. Only those fully trained in ATV operations should conduct loading/unloading procedures. The following safety measures are recommended:

- Wear all PPE (including gloves, helmet, etc.) until ATV is either secured or unloaded.
- Ensure header board (board placed in front of bed of truck or trailer) is in place and in good condition.
- Secure ATV tire ramps to trailer or tailgate and on level terrain.
- If possible, use a tilt trailer to haul an ATV. If this is not feasible, try to lower back end of vehicle to reduce slant of loading ramp. Back into ditch, hillside, or anything else to lower back end of vehicle.
- When loading ATV onto vehicle or trailer, keep seated and lean body weight forward on ATV.
- When unloading ATV, keep seated and keep weight forward. This helps keep ATV from flipping over backwards.
- Never load or unload an ATV with a load on the racks. Load all ATVs empty.

## Securing ATV for transport

ATVs improperly loaded can be dangerous to you and other highway users. Improperly distributed loads affect steering. Not securing loads properly can result in dislodged loads, damaged equipment and injury or death during a quick stop or crash.

Drivers are responsible for their load -regardless of who actually loads the equipment. All drivers are responsible for:

- inspecting the ATV
- recognizing overloads and poorly balanced weight
- ensuring the gear loaded on the ATV is securely tied down

## - Securing ATVs

- Secure ATV in its normal operating position (on all four wheels)
- Set the parking brake and place transmission in gear
- Turn fuel valve OFF
- Use chocks (that fit snugly against wheels) in front and back of ATV. Front-end header boards should also block forward movement of ATV.
- Tie down ATV on at least each corner - use tie downs made from one-inch nylon strap or greater, with hooks at each end and that have ratcheting buckles or tie-down straps that will lock in place. (Do not use ordinary rope due to stretching.)
- Never haul ATVs with a load attached to the cargo racks. There is potential to lose the load from the ATV while in transit.
