

**National Interagency Coordination Center
Incident Management Situation Report
Tuesday, November 20, 2018 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial Attack Activity:	Light (33) new fires
New large incidents:	1
Large fires contained:	1
Uncontained large fires:**	2
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

**Uncontained large fires include only fires being managed under a full suppression strategy.

*** **Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.**

*** Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Service Discussion: Light offshore winds will be possible across Southern California as a weakening area of low pressure moves east into Arizona by afternoon. Developing high pressure along the central and northern Californian coast will allow for a dry off shore flow to develop along the coast and for a weak northerly flow to develop on the north end of the Sacramento Valley. To the north, the strong high pressure ridge will linger over the Pacific Northwest and the Northern Rockies and will allow for the strong temperature inversions to continue. In the East, a very flat trough of low pressure will slowly move east from the Great Lakes to the eastern seaboard by afternoon. Scattered rain and snow showers will be possible across New York and New England. Showers will continue along the Texas Coast and the coast of Louisiana as the remnants of an old frontal boundary linger just off shore.

On A Hillside Where Rolling Material Can Ignite Fuel Below

Operational Engagement Category

When firefighters find themselves in Watchout Situation #13, they must answer the following questions:

- Can you locate/construct a line to prevent material from rolling below? What do you call line that catches rolling material? Describe how you would construct this type of line and what factors you would have to consider (e.g., slope, fuels, etc.)
- Will you get enough warning of rolling material to prevent being hit by it? Who needs to be watching for rolling material? What kinds of warning systems could you establish?
- Can you see where any material that rolls below you goes and what it does? What can happen when material rolls out of the fire and below you out of view? What needs to be done to mitigate this danger?
- Is the area free of large amounts of flashy fuels? Review the Common Denominators of Tragedy Fires.
- Is the area free of chimneys, gullies, and steep slopes? Review the Common Denominators of Tragedy Fires.
- Do you have two escape routes so you can go either way? Talk about where your most likely escape routes and safety zones will be when you are on a hillside where rolling material can ignite fuel below.
- To reduce the risks:
 - Post lookouts.
 - Consider locating line in a defensible position.
 - Talk about steep fires where you have had material rolling out below you and how you dealt with it.
