

**National Interagency Coordination Center
Incident Management Situation Report
Tuesday, June 4, 2019 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (92) new fires
New large incidents:	2
Large fires contained:	0
Uncontained large fires:**	3
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 6 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: The high pressure area over Alaska will weaken into a very weak easterly flow that will allow for more moisture to enter the state's interior from the Yukon Territory. Scattered storms are expected across the Interior. In the Lower 48, the breezy westerly flow across the northwest will expand to include areas from the Pacific Coast to the Great Lakes. The low pressure area over Southern California will drift east to northern Baja California and keep Arizona under a breezy and dry southerly flow. Convection across New Mexico will become more widespread. Hot and dry conditions were expected across the southern Mississippi River Valley as a high pressure ridge noses northward into the country from the Gulf of Mexico. Showers and storms will be possible across parts of the Carolinas in the afternoon, but little drought relief is expected.

Aviation Watch Outs

Aviation Category

As part of risk management, especially during high activity fires, each aviation manager and employee should be asking questions.

- Is the flight necessary?
- Who is in charge?
- Are hazards identified and known?

Flight Hazards: Have they been identified and assessed? Have the pilots been informed?

- Should the operation or the flight be stopped due to a change in conditions? Consider the following:
 - Radio Communications
 - Environmental Conditions – weather, visibility, terrain, elevation, temperatures
 - Mission Priorities
 - Successful Mission Completion Probabilities
- Is there a better way to do it?
- Is there pressure to complete a mission at all costs?
- Can you justify your actions?
- Is the mission airspace confined or congested?
 - Multiple aircraft
 - Mixed types of aircraft
 - Poor visibility
- Do you have an escape route?
- Are any guidelines being ignored or policies being broken?
- Are communications getting tense?
- Are you deviating from the assigned operation or flight?
