

**National Interagency Coordination Center
Incident Management Situation Report
Sunday, June 9, 2019 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (82) new fires
New large incidents:	3
Large fires contained:	1
Uncontained large fires:**	7
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	1

Nationally, there are 7 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 2)

New fires: 14
 New large incidents: 0
 Uncontained large fires: 2

Mountain, Tonto NF. Eight miles northeast of Cave Creek, AZ. Short grass. Moderate fire behavior with backing, flanking and smoldering. Road closures in effect.

Maroon, Coconino NF. Thirteen miles northeast of Flagstaff, AZ. Timber. Minimal fire behavior with smoldering.

* **Elk**, Gila NF. IMT 2 SW Team 3 mobilizing to incident. Eighteen miles northeast of Aragon, NM. Timber. Moderate fire behavior with backing, creeping, and single-tree torching. Structures threatened.

Coldwater, Coconino NF. Previously reported incident. Twelve miles northwest of Strawberry, AZ. Timber and brush. Moderate fire behavior with flanking, backing and group torching. Structures threatened. Last narrative unless significant activity occurs.

Predictive Services Discussion: High pressure over the Alaskan Interior will weaken further and will allow for an increase in the afternoon convection to occur. A large but weak high pressure ridge over the West will allow for warming temperatures that will accelerate the drying and curing process in the fine fuels. The trough of low pressure over the Great Plains will weaken into a breezy westerly flow while a weakening low pressure area over the Southeast continues to pound the Deep South with moisture. New England and the Mid-Atlantic States will remain warm and dry under the influence of a weak ridge of high pressure moving east from the Great Lakes Region.

Escape Routes 3

Operational Engagement Category

A primary objective of every operational fire plan is to keep firefighters out of entrapment situations. However, firefighters must always be prepared to escape quickly to a safety zone or deployment area. Consider the following during discussion of escape from possible entrapment.

- Have a plan that includes trigger points!
 - **Trigger Point:** An observable event that triggers a pre-determined action. Example: Temperature reaches 98 Degrees and RH goes into single digests the crew will follow the established escape route to the safety zone.
- Reassess escape routes throughout the operational period.
 - Has access to escape routes become more difficult as the day progresses?
 - Do you have more than one escape route?
 - Are all escape routes clearly marked?
 - Are all firefighters familiar with the escape routes?
- During an escape, time will be short. Describe considerations you might make in this situation such as:
 - Maintain control of all critical equipment such as PPE and radio... jettison gear that will not aid in your escape!
 - Maintain contact with all other crewmembers!
- Describe your vision of a good safely zone. How is that different from a deployment area?
- You should always know the location of your escape routes leading to safety zones and deployment areas.
