Predictive Services Discussion: Low pressure moving east across the southern Bering Sea will continue to pump moisture into the interior of Alaska. This will result in continued scattered showers with embedded storms. The presence of a weakened high pressure ridge over the Interior of the state will keep temperatures above average, however. The Four Corners high pressure area will remain amplified over the Southwest and will allow for the weak monsoonal flow to continue across New Mexico and Arizona. To the west, the models point to a slight off shore flow from the Bay Area south which should lead to increased drying in the fuels. Troughyness over the Pacific Northwest will keep temperatures near average across the northern tier. Heavy rainfall will continue along the northern Gulf Coast as the landfalling tropical system remains stalled.
