

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, August 8, 2019 – 0530 MT
National Preparedness Level 3**

National Fire Activity

Initial attack activity:	Light (127 new fires)
New large incidents:	4
Large fires contained:	4
Uncontained large fires:**	24
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	1
Type 2 IMTs committed:	7

Nationally, there are 60 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Great Basin Area (PL 3)

New fires:	17
New large incidents:	1
Uncontained large fires:	11
Type 2 IMTs committed:	2

Corta, Elko District, BLM. Eight miles southeast of Jiggs, NV. Timber, brush and tall grass. Active fire behavior with wind driven runs, short-range spotting and isolated torching. Structures and sage-grouse habitat threatened. Road closures in effect.

Nethker, Payette NF. IMT 2 (GB Team 3). Thirty miles northeast of McCall, ID. Timber. Active fire behavior with creeping, group torching and spotting. Structures threatened. Evacuations, area, road and trail closures in effect.

Cove Creek, Salmon-Challis NF. IMT 2 (GB Team 7). Twenty-seven miles northwest of Salmon, ID. Timber and tall grass. Active fire behavior with creeping, single tree torching and spotting. Structures threatened. Trail closures in effect. Reduction in acreage due to more accurate mapping.

Shelter Pass, Bear River Area, Utah DOF. Twenty-one miles south of Kelton, UT. Timber, tall grass and brush. Active fire behavior with running and single tree torching. Sage-grouse habitat threatened.

Goose, Elko District, BLM. Twenty-five miles east of Jackpot, NV. Timber, brush and tall grass. Minimal fire behavior with isolated torching, smoldering and creeping. Structures and sage-grouse habitat threatened. Reduction in acreage due to more accurate mapping.

Prospect Springs, Bear River Area, Utah DOF. Five miles southeast of Snowville, UT. Short grass, timber and brush. Moderate fire behavior with single tree torching and creeping. Structures and infrastructure threatened.

Pot Hole, Mountain Home Air Force Base. Ten miles south of Hammett, ID. Short grass and brush. Minimal fire behavior with smoldering and isolated torching. Sage-grouse habitat threatened.

Shafter, Elko District, BLM. Twenty-five miles west of Wendover, NV. Timber, brush and short grass. Minimal fire behavior with smoldering. Sage-grouse habitat threatened.

Paint Mine, Richfield Field Office, BLM. Four miles north of Nephi, UT. Short grass. Minimal fire behavior with crowning and smoldering.

* **Green Springs**, Humboldt-Toiyabe NF. Fifty-one miles southwest of Austin, NV. Timber and brush. Extreme behavior with running, torching and spotting. Sage-grouse habitat threatened.

Alaska, Uinta-Wasatch-Cache NF. Three miles southeast of Provo, UT. Brush and grass. Minimal fire behavior.

*1 Hectare = 2.47 Acres

Predictive Services Discussion: A strong but weakening low pressure area located off the Pacific Northwest Coast will begin to lowly move east. As it does so, the Four Corners High will begin to slowly shift east and flatten. A large plume of monsoonal moisture will be drawn northward as far north as British Columbia and central Alberta. Scattered storms are expected inland from the coastal ranges to the Great Plains. Storms on the western fringes will be a mix of wet and dry while storms closer to the Continental Divide will be mostly wet. This will be a big lightning day across the Great Basin, eastern Oregon, eastern Washington, southern Montana, Wyoming, and the Four Corner states. In the East, expect seasonal temperatures and overall dry conditions. Scattered storms will be possible across the Ohio River Valley along a weakening frontal boundary. Texas will remain very hot and dry.

Wildland/Urban Interface Watchouts

Operational Engagement Category

The primary consideration is to first assure firefighter and public safety. It is a must to assess potential fire behavior, ingress/egress routes, nature of the threat, hazardous materials, and available water supplies before engaging in the protection of any structures. The first step in conducting a safe operation is to assess whether the firefighting operations can be conducted safely.

Consider the “Wildland/Urban Interface Watchouts” in completing a risk analysis for the urban interface area to be protected. Remember there are three categories of structures:

- Those that are not threatened.
- Those that are threatened.
- Those that have already been lost or too dangerous to protect.

Wildland/Urban Interface Watchouts:

- Poor access and narrow, one-way roads. A rapidly spreading fire could trap apparatus and personnel before they can turn around or move away from the flames and smoke.
- Observe bridge limits. Exceeding bridge limits could lead to bridge failure with a resultant blocking of ingress/egress routes that could result in the loss of an escape route or loss of equipment.
- Inadequate water supply. Without a reserve supply of water, the fire can overtake an area before the fuels can be cleared away.
- Natural fuels are located 30 feet or closer to structures on level ground. Remember structures on slopes require greater clearance. Structures are located on canyon slopes or “chimneys” on slopes of 30% or more with continuous, flashy fuels. The resulting rate of spread of any fire in this terrain can quickly extend beyond control.

Extreme fire behavior: Situations involving crowning, large flame heights and erratic fire behavior can extend in an unpredictable manner beyond the control of any number of personnel. Strong winds of 25+ MPH: Winds increase the chance of spotting over the heads of firefighters and trapping them between both fire areas. Winds also cause greater preheating of fuels in the path of a fire front.

- The need to evacuate the public, livestock, pets, and/or animals. This critical activity can pull personnel from the firefighting activity and can distract attention from fire behavior at a time when the greatest alertness is needed.
- Propane and above ground fuel tanks that are next to wooden structures or close to vegetation.
- Power lines and poles: What is their location in relation to the structures that are being protected? Watch for both overhead and downed power lines.
- Local citizens are attempting suppression activities. Lack of knowledge in fire suppression may lead to unsafe tactics.
- Airtanker retardant drops and helicopter bucket operations: Establish communications and keep fire personnel out of the drop zone.
