# National Interagency Coordination Center Incident Management Situation Report Sunday, September 8, 2019 - 0530 MT National Preparedness Level 2 

National Fire Activity
Initial attack activity:
Light (177 new fires)
New large incidents:
8
Large fires contained:
3
Uncontained large fires:***
22
Area Command teams committed: 0
NIMOs committed: 1
Type 1 IMTs committed: 2
Type 2 IMTs committed: 6

Nationally, there are 48 large fires being managed under a strategy other than full suppression. *** Uncontained large fires include only fires being managed under a full suppression strategy.

*1 Hectare = 2.47 Acres
Predictive Services Discussion: The deep trough along the West Coast will split into two low-pressure areas. The first area will remain stalled off the coast of Vancouver Island and will pump moisture into the Cascades. The second area will move inland across Oregon and Nevada into Idaho, Wyoming and Montana bringing widespread moderate rainfall along with much cooler temperatures. To the south, breezy winds are expected across the southern Great Basin. Breezy north winds will be possible across Northern California as a north to south pressure gradient sets up late in the day. A resurgence in the monsoon is expected across New Mexico. In the East, hot and dry conditions will continue across the Deep South into Texas as the Bermuda High remains amplified over the region. The Great Lakes and the Northeast will remain under a dry and breezy westerly flow.

ATV - How to Properly Ride and Operate<br>Vehicles/Roads Category

Riding an ATV correctly allows the operator to operate and control the machine more easily, and react more quickly to changes in terrain and environment. Proper riding posture includes:
$\checkmark$ head and eyes up, looking forward;
$\checkmark$ shoulders relaxed, with elbows bent slightly;
$\checkmark$ hands on the handlebars;
$\checkmark$ knees in toward the gas tank;
$\checkmark$ feet on the footrests, toes pointing straight ahead; and
$\checkmark$ back should be straight but not tense.

- To turn an ATV, keep most of your body weight on the outside foot peg and lean your upper body into the turn. Never lower your foot to the ground for stability-could cause ejection if foot is caught by tire.
- When climbing hills, shift your body weight forward to keep the front wheel(s) on the ground.
- If stopped while going uphill, do not apply the rear brake only. Apply equal pressure to both front and rear brakes, but never only to the rear brake. Get off the machine and turn it around to proceed down the hill.
- When going downhill, keep the engine running and in low gear, apply both front and rear brakes with even pressure and avoid sharp turns. Slide body forward on seat towards gas tank, keeping body weight back by leaning backwards. This will help keep weight on back wheels and lessen potential to flip ATV over forward. Avoid "side hill" situations. When they are unavoidable, lean into the hill.
- When carrying a load up hill, if possible, place load on the front of the ATV to help keep the front end of the ATV from flipping over. If going downhill, place load on back of ATV to help keep the ATV from flipping over forward. If loads cannot be adjusted, (drip torch mounted on back), try to equalize the load on front and back if possible.
- Only operate an ATV under the conditions for which you have been trained, qualified for and are experienced in riding.
- As a last resort to avoid an impending collision, roll off the vehicle and kick yourself free of it.
