# National Interagency Coordination Center Incident Management Situation Report <br> Monday, September 9, 2019 - 0530 MT <br> National Preparedness Level 2 

National Fire Activity
Initial attack activity:
Light (119 new fires)
New large incidents:
Large fires contained:
Uncontained large fires:***
Area Command teams committed:
NIMOs committed:
Type 1 IMTs committed:1

Type 2 IMTs committed:3

Type 2 IMTs committed. 10
Nationally, there are 47 large fires being managed under a strategy other than full suppression. *** Uncontained large fires include only fires being managed under a full suppression strategy.

*1 Hectare $=$ 2.47 Acres
Predictive Services Discussion: The stalled low-pressure area along the coasts of Washington and Vancouver Island will begin to move southeast late in the day. This will allow a breezy westerly flow to develop across Northern California, Oregon, northern Nevada and Idaho. Cooler temperatures will be present across California, but it will remain dry. Some precipitation will be possible across far western Texas and up in the Panhandle; however, the remainder of the state and most of Oklahoma will remain hot and dry. Widespread showers will be possible along the Canadian Border in the Upper Midwest as a cold front pushes east. Most of the East Coast will remain hot and dry except possibly for portions of the Mid-Atlantic States, which could see scattered storms late in the day along a stalled frontal boundary.

Attempting A Frontal Assault On A Fire<br>Operational Engagement Category

Attempting a frontal assault on a fire is recognized as Watchout Situation \#10 and is a potentially dangerous tactic.

If your tactics include a frontal assault, the following checklist must be adequately addressed before engaging the fire:

- Has the fire been scouted and sized up? Who will scout and size up a fire and what are they looking for?
- Is your position defensible? List what makes a firefighter's position defensible. (Anchor points, safety zones, escape routes, etc.)
- Are escape routes and safety zones adequate? Review what constitutes an adequate safety zone and escape route.
- Do you have an anchor point? How would you establish an anchor point for a frontal assault on a fire?
- Do you have adequate resources to complete the assault? Discuss things you need to consider; for example, if the frontal assault fails, do you have backup?
- Are you informed on strategy, tactics and hazards? Consider what could happen if someone has a different approach than you; i.e., the IC has a burnout operation planned while you are attempting frontal assault.
- Is the terrain favorable to holding the fire? Discuss ways the terrain will influence where you will make a stand.
- Are you relying on aircraft for support operation? Any operation, especially frontal assault, should not need air resources to be safe.

In order to reduce the risks, reassess your tactics, post lookouts, identify situations in which firefighters may be enticed to attempt frontal assault on a fire. Review why this may or may not be a good idea.
