

**National Interagency Coordination Center  
Incident Management Situation Report  
Monday, September 30, 2019 – 0530 MT  
National Preparedness Level 1**

**National Fire Activity**

Initial attack activity:	Light (64 new fires)
New large incidents:	0
Large fires contained:	0
Uncontained large fires:***	7
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 25 large fires being managed under a strategy other than full suppression.  
\*\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

### **Southern Area (PL 3)**

New fires: 25  
New large incidents: 0  
Uncontained large fires: 3

**Building Bridges**, Alabama Forestry Commission. Started on private land six miles southeast of Valley Head, AL. Short grass and southern rough. No new information.

**Johnson Quarter**, Alabama Forestry Commission. Started on private land four miles northwest of Florala, AL. Short grass. No new information.

**Kings Chapel Rd**, Alabama Forestry Commission. Started on private land eight miles southwest of Sylacauga, AL. Timber and short grass. No new information.

\*\*\*Additional wildfire information is available through the Geographic Areas at <https://gacc.nifc.gov/>

**Predictive Services Discussion:** The low pressure area that has been impacting the West for the past several days will begin to split into two systems with the larger system quickly moving off to the northeast into Canada taking most of the moisture with it. The second low pressure area will remain parked over the northern Great Basin and will keep temperatures about 20 degrees below normal west-wide. Out ahead of the low pressure area, over the Four Corners Region, a breezy southwesterly flow will be in place. Residual tropical moisture will lead to scattered storms across West Texas and eastern New Mexico. In the East, the record heat will continue to elevate fire potential as the upper level high pressure ridge strengthens and pushes temperatures well into the 90s making today feel more like July 30 instead of September 30!.

## Retardant & Water Drop Safety

*Aviation Category*

Having retardant (jell, foam), paracargo, and water dropped on a fire should be a routine event. However, there are risks associated with drops that can pose serious threats to personnel and equipment. Consider the following for all drops:

- Be aware of the location and flight patterns (final approach, drop zone, exit) of aircraft during drop operations.
- Be sure you have positive contact with the pilot before the drop.

All persons, vehicles, and animals should be cleared from the danger zone prior to the arrival of the aircraft.

Beware of “streamers” or parachutes that don’t open.

- Personnel can be injured by the impact of material dropped by aircraft. Clear personnel out of the target area when the drop is conducted. If an individual is caught unaware in a drop zone:
  - Hold your hand tool away from your body.
  - Lie face down with hardhat in place and head toward the oncoming aircraft.
  - Grasp something firm to prevent being carried or rolled about by dropped liquid.
  - Do not run unless escape is ensured.
  - Get clear of dead snags and tops.
  - Be aware of rolling debris below the drop site in steep terrain.
- Working in an area covered by retardant should be done with caution due to slippery surfaces.
- If possible, wash the retardant off your skin to prevent irritation.
