

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, November 22, 2019 – 0800 MT  
National Preparedness Level 1**

**National Fire Activity (November 15 – November 21, 2019)**

Initial attack activity:	Light (303 new fires)
New large incidents:	11
Large fires contained:	11
Uncontained large fires:***	2
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 3 large fires being managed under a strategy other than full suppression.

\*\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

\*\*\*Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

**Predictive Services Discussion:** Weak off shore flow will continue across California on Friday and will keep humidity levels low. The flow will intensify early Sunday morning as pressure gradients align to create a weak Sundowner wind. Santa Ana and Mono Winds are possible in California on Monday and Tuesday as a strong northerly flow develops in the wake of a strengthening system that will cross the Continental Divide by Tuesday afternoon and move into the central Great Plains, where it will begin producing significant snowfall. As the system begins to pull off to the northeast toward the Great Lakes on Wednesday morning, a cold and windy northerly flow will develop over the Plains. Also on Wednesday, another strong, wet, and cold system will begin to move on shore into Oregon and California. Widespread heavy snow will be possible in the mountains. Some valley locations could see some snowfall as well. The Sierra and the southern Cascades could benefit greatly from this system. The system will weaken as it moves into the Great Basin on Thursday. However, the deep troughy nature of the system will allow for it to pull down unseasonably cold temperatures from Canada into areas west of the Continental Divide for Thanksgiving.

## Spot Weather Forecast

*Weather - Fire Behavior Category*

Spot weather forecasts should be requested or submitted online for those fires that have potential for extreme fire behavior, exceed initial attack, or are located in areas where Red Flag Warnings have been issued.

- Basic elements needed for a spot weather forecast include:
  - Name of fire and management agency.
  - Request time and date.
  - Location by ¼ section.
  - Drainage name.
  - Exposure.
  - Size.
  - Elevation (top and bottom).
  - Fuel type.
  - Fire character (ground, crown, etc.).
  - Weather conditions (place, elevation, observation time, wind direction, wind velocity, dry bulb, wet bulb, remarks, and important U.S. indicators).

**Activity: Calibrate your Kestrel and review belt weather kit use.**
