

**National Interagency Coordination Center
Incident Management Situation Report
Friday, February 14, 2020 – 0800 MT
National Preparedness Level 1**

National Fire Activity (February 7 – February 13, 2020)

Initial attack activity:	Light (145 new fires)
New large incidents:	0
Large fires contained:	0
Uncontained large fires:***	0
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 0 larges fire being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

***Prescribed fire acres are for reference only and may not reflect the most up-to-date information.

***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

Predictive Services Discussion: A system moving east across south central Canada will bring gusty winds and cooler temperatures to areas along the Rocky mountain front from Wyoming north to the border on Friday. A stronger system will bring more mountain snowfall to the Pacific Northwest and the Northern Rockies Saturday through Sunday night as it too moves east along the border. Warm, dry, and occasionally breezy conditions will continue across the Southwest and California into the middle of next week as high pressure begins to rebuild along the West Coast. By Thursday, low elevation temperature inversions will be possible as the ridge begins to move inland. In Alaska, quiet conditions with seasonal temperatures are expected until late Tuesday which is when the next strong system will move east across the Interior bringing more snow. Latest weather data suggests that the Kenai Peninsula and the Chugach Mountains could get some much needed moderate to heavy snowfall amounts from it on Wednesday.

Hazardous Materials Encounters

Miscellaneous Fireline Hazards

Employees who may encounter hazardous materials in the field should be trained, as mandated by OSHA 1910.120 (q), First Responder Awareness Level. However, employees should always recognize that hazmat encounters require special precautions.

- Hazardous materials in the field include, but are not limited to:
 - Clandestine drug waste – waste as a result of “meth” labs, etc., which may look like common household trash at first glance. Drug lab waste can be identified by the presence of gallon plastic jugs, large plastic bags, 5-gallon buckets, and laboratory equipment (tubes and beakers).
 - Midnight dumping – may be recognized by the presence of barrels or other containers, discoloration of land, plants, or water, and/or dead vegetation and animals.
 - Transportation accidents – truck, rail, or pipeline accidents may result in the spillage or release of hazardous materials that may result in danger to life, property, or resources.
- In all instances, self-protection is your primary responsibility.
- Respond to all encounters by implementing the Three Rs:
 - **Recognize:** Attempt to identify the substance using the North American Emergency Response Guide, occupancy/location, placards/labels, container shapes/colors, and/or MSDS shipping papers.
 - **Retreat:** Move upwind, upgrade, or upstream; isolate the material; and deny entry to the site. Guidelines for isolation distances include: 150 feet for a minor incident (1 drum, 1 bag, etc.); 500 feet for a major incident (more than 1 drum, etc.); 300 feet for a residential and light commercial incident; 1,000 feet for an open area; 2,500 feet for an incident with BLEVE potential; 2,500 feet for the staging area (must be upwind with vehicles in a headed-out position).
 - **Report:** Notify your supervisor and agency dispatcher. Request hazmat assistance via a safe route.
