

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, May 6, 2020 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (94 new fires)
New large incidents:	5
Large fires contained:	1
Uncontained large fires:***	4
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there is 1 large fire being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

***Prescribed fire acres are for reference only and may not reflect the most up-to-date information.

***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

Predictive Services Discussion: A weak, fast-moving cold front will move east across the Pacific Northwest and into the Northern Rockies by afternoon, spreading showers and storms across both regions. The Columbia Basin will likely be shadowed out from most of the precipitation. Breezy winds are expected along the southern edge of the front across Oregon and the northern Great Basin. Critical fire weather conditions may be possible in these areas and across Northern California as a breezy, dry, northerly downslope flow briefly develops. Single digit humidities will redevelop by afternoon across Arizona and southern Nevada. In Alaska, dry conditions will continue, except along the slopes of the Alaska Range, where scattered showers and possible storms are expected to develop during the afternoon hours.

Ash Pit Hazards

Miscellaneous Fireline Hazards

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when a ground fire consumes underground fuels creating an empty space that is imperceptible from the surface.

- Environmental factors that increase the risk of ash pit formation after a wildfire:
 - Extensive root systems of trees and shrubs.
 - Deep duff or peat, the organic layer covering mineral soil.
 - Landscapes that have once been cultivated or manipulated by heavy equipment, old dozer piles, sawmills, timber sale yards, or decking areas.
 - Small rodent holes that have become filled with decadent, combustible debris, beaver holes near dams and stream beds, badger and coyote dens.
 - White ash is sometimes an indicator of ash pits as are swarms of hovering insects.
 - With the sun behind the suspected ash pit, look for small nearly translucent smokes that dissipate quickly above the ground.
 - Ash pits often give off the smell of incomplete combustion or of creosote burning.

- Mitigation measures to consider:
 - Identification of high-risk landscape.
 - Identify and flag all hazardous discovered ash pits.
