

**National Interagency Coordination Center
Incident Management Situation Report
Monday June 1, 2020 – 0800 MT
National Preparedness Level 1**

National Fire Activity May 29 – May 31, 2020:

Initial attack activity:	Light (348 new fires)
New large incidents:	12
Large fires contained:	1
Uncontained large fires:***	12
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 2 large fires being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 3)

New fires: 58
 New large incidents: 4
 Uncontained large fires: 4

* **Ocotillo**, Central District, Arizona Department of Forestry and Fire Management. One mile north of Cave Creek, AZ. Brush, chaparral and tall grass. Minimal fire behavior with smoldering. Evacuations, area, road and trail closures in effect.

* **Sunset**, Phoenix District Office, BLM. Thirty-two miles southeast of Prescott, AZ. Brush and tall grass. Active fire behavior with running and spotting. Road and trail closures in effect.

* **Sawtooth**, Tonto National Forest, USFS. Seven miles northwest of Superior, AZ. Brush and tall grass. Active fire behavior with short crown runs, wind-driven runs and uphill runs.

Park, San Carlos Agency, BIA. One mile north of San Carlos, AZ. Brush and short grass. Moderate fire behavior with running and spotting.

***Prescribed fire acres are for reference only and may not reflect the most up-to-date information.

***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

Predictive Services Discussion: Cooler than average conditions will continue along the West Coast as a low pressure trough offshore continues to strengthen. Scattered wet storms will be possible across western portions of the Northern Rockies, Oregon, northeastern California, and Nevada. Isolated dry storms will be possible across the Four Corner states and southern Wyoming. Hot and dry conditions will be possible across the Great Plains as the weakening high pressure ridge continues to move east. Breezy, dry, but cooler conditions will be present across the Northeast as northwesterly flow continues. In Alaska, scattered showers will be possible across the Interior, and southwestern-south central portions of the state as a low pressure area over the eastern Aleutian Islands continues to pump moisture into the state.

EXTREME FIRE BEHAVIOR 1

Weather / Fire Behavior Category

Mild, moderate, and EXTREME fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions, as well as predicted and current weather conditions. As fire behavior changes, it is critical to act decisively in regard to the changing situation.

Discuss the following indicators of extreme fire behavior:

- Relative humidity less than 15%.
- 1-hour fuel moisture less than 5%.
- Transition from surface to crown fire.
- Smoldering fires that exist in the early part of the day are beginning to burn very actively as the day progresses.
- Approaching thunderheads with dark clouds beneath.
- Presence of dust devils indicating an unstable atmosphere.
- Increased spotting.
- Sudden calm.
- High clouds moving fast in direction different from surface wind.
- Predicted Haines Index of 5 and 6 in those areas where this level is a good indicator of atmospheric instability.
- Fire whirls.
