# National Interagency Coordination Center Incident Management Situation Report <br> Wednesday June 3, 2020 - 0730 MT <br> National Preparedness Level 2 

## National Fire Activity:

Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires:***
Area Command teams committed:
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:

Light (92 new fires)
6
5
6
0
1
1
0

Nationally, there are 5 large fires being managed under a strategy other than full suppression. *** Uncontained large fires include only fires being managed under a full suppression strategy.

***Prescribed fire acres are for reference only and may not reflect the most up-to-date information. ***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

Predictive Services Discussion: Low pressure off the coast of Southern California will continue to keep the southwestern portion of the country under an active southwesterly flow pattern that will allow for isolated to widely scattered afternoon storms to develop over the Great Basin, Southwest, and Central Rockies during the afternoon. While some storms will be wet, the majority will be mostly dry. A breezy westerly flow pattern will keep temperatures near average. Gusty downslope winds will be possible along the Rocky Mountain Front in Montana. In Alaska, isolated storms will be possible across the far eastern and far western Interior. Breezy and dry conditions will allow for further drying of fuels across the central portion of the state.

## Escape Routes Take 5@2

Operational Engagement
Its 1400...you have been working all morning. How far away have your safety zones become? Safety zones are only good if you can reach them. How long will your escape route take? What is the condition of the crew? How long will it take your slowest member to get there? Are your expectations realistic? Look at the times below...if your fire blew up right now, can you and every member of your crew make it to your safety zone?
