

**National Interagency Coordination Center
Incident Management Situation Report
Sunday, June 21, 2020 – 0730 MT
National Preparedness Level 3**

National Fire Activity:

Initial attack activity:	Light (88 new fires)
New large incidents:	4
Large fires contained:	7
Uncontained large fires:***	17
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	3
Type 2 IMTs committed:	4

Nationally, there are 17 large fires being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 4)

New fires:	9
New large incidents:	0
Uncontained large fires:	8
Type 1 IMTs committed:	3
Type 2 IMTs committed	2

Bush, Tonto NF, USFS. IMT 1 (SW Team 1). Thirty-eight miles northeast of Mesa, AZ. Brush and tall grass. Moderate fire behavior with uphill runs, short range spotting and backing. Numerous structures threatened. Evacuations, road, trail and area closures in effect.

Bighorn, Coronado NF, USFS. IMT 1 (SW Team 2). IMT 1 (NR Team 1) mobilizing. Five miles northeast of Tucson, AZ. Chapparal, brush and timber. Active fire behavior with uphill runs, flanking and spotting. Numerous structures and energy infrastructure threatened. Evacuations, trail and area closures in effect.

Mangum, Kaibab NF, USFS. IMT 2 (SW Team 3). Twenty-four miles southeast of Fredonia, AZ. Timber, brush and short grass. Active fire behavior with wind driven runs, torching and spotting. Numerous structures and energy infrastructure threatened. Evacuations, road, trail and area closures in effect.

Tadpole, Gila NF, USFS. Twelve miles north of Silver City, NM. Timber, brush and chaparral. Active fire behavior with flanking, backing and single tree torching. Structures threatened. Road, trail and area closures in effect.

Bringham, Apache-Sitgreaves NF, USFS. IMT 2 (SW Team 4). Twenty-two miles north of Morenci, AZ. Brush, short grass and timber. Active fire behavior with uphill runs, flanking and banking. Structures threatened. Road, trail and area closures in effect.

Blue River, San Carlos Agency, BIA. Eight miles northeast of San Carlos, AZ. Brush and tall grass. Minimal fire behavior.

Good, Gila NF, USFS. Twenty-nine miles north of Silver City, NM. Timber, brush and tall grass. Moderate fire behavior with backing, creeping and smoldering.

Dry Lake, San Carlos Agency, BIA. Thirty-four miles east of San Carlos, AZ. Brush, tall grass and timber. Minimal fire behavior.

Vics Peak, Cibola NF, USFS. Thirty miles north of Truth of Consequences, NM. Moderate fire behavior with short crown runs, uphill runs and backing. Road, trail and area closures in effect. Last narrative report unless significant activity occurs.

Predictive Services Discussion: High pressure will strengthen over California and the Southwest. This will lead to warming temperatures and even drier conditions that will extend as far east as West Texas. Afternoon humidity levels will be in the lower to middle single digits from the Central Great Basin south into Mexico. Temperatures across the Northwest will also warm, but not as significantly. Convective activity will redevelop along the northern and central portions of the Continental Divide and across the Northern Great Plains. A dry line of thunderstorms may develop across portions of West Texas from the panhandle south to Big Bend. Showers will continue across New England. In Alaska, scattered showers will continue across the Interior.

Wildland/Urban Interface – Structure Protection

Operational Engagement Category

The primary consideration of any operation is to assure firefighter and public safety. It is a must to assess potential fire behavior, ingress/egress routes, nature of the threat, hazardous materials, and available water supplies before engaging in the protection of any structure.

Factors that may make an attempt to save a structure too dangerous include:

- The fire is making a sustained run and there is little or no clearance between the structure and the fuel.
- The fire behavior is extreme; spot fires are numerous and the spread is outpacing containment.
- Water supply will not last as long as the threat of the fire.
- The fire intensity dictates that you leave the fire area immediately.
- The structure is constructed of wood and has a wood shake roof.
- The roof of the structure is more than one-quarter involved.
- There is fire inside of the structure, or windows are broken and there is no way to quickly repair them.
- You cannot safely remain at the structure because your escape route could become unusable.

When implementing a plan to protect structures, consider the following:

- Do not enter a burning structure unless you are trained, equipped, and authorized. Firefighter safety and survival is the number one priority.
- Always stay mobile and wear all of your PPE.
- Back in equipment to allow for a quick escape.
- Coil a short, charged line with a fog nozzle on your engine for safety and quick knockdown capability.
- Don't make long hose lays.
- Keep at least 100 gallons of water reserve in your tank.
- Check the road system before the fire approaches. Know bridge limits, alternate access routes, and turnarounds for your vehicle and other support vehicles.
- Determine if residents are home. Leave on the inside and outside lights, regardless of the time of day. Close the garage door.
- Place the owners' ladder at a corner of the home on the side with the least fire threat.
- Coil and charge garden hoses.
- Check and mark hazmat; e.g., LPG (Liquefied Propane Gas), pesticides, and paint storage.
