Predictive Services Discussion: The Four Corners High will begin to migrate east into the Lower Mississippi Valley. The focus of the heat will also shift east. Very hot and dry conditions will be possible across West Texas. Widely scattered monsoonal storms will move north along the Arizona and New Mexico state line into southeastern Utah and Colorado. Further West, a weak trough along the West Coast may bring slight cooling to the Western Great Basin and Southern California. Another weak cold front will move east across the Northern Rockies into the Great Plains bringing scattered wet storms to Wyoming and breezy west winds to the Rocky Mountain front from Wyoming north to the Canadian Border.

# In Country Not Seen In Daylight 

Operational Engagement Category

Often, firefighters arrive on a fire after dark. This is recognized as Watch Out Situation \#2. Before safely fighting fire, in country not seen in daylight, firefighters must be able to answer the following questions:

- Can the resources you are replacing give you a thorough briefing? Identify whom you might get information from. Can you meet up with the departing overhead/resource leaders?
- Can you observe the area/use scouts? List ways you could observe the area you need to work.
- Have escape routes and safety zones been thoroughly scouted and marked for night use? Talk about what constitutes an escape route and a safety zone; who would identify them; and in what ways might they be marked.
- Have potential dangers been located; can they be mitigated? What are the dangers associated with Watch Out Situation \#2? How can they be worked around?
- Reduce the risks by:
- Posting lookouts.
- Checking communications.
- Retreat if you have doubts about your escape routes or safety zones, or the situation becomes too complex. Give examples of arriving on a fire after dark and what was done to allow you to fight fire safely in country not seen in daylight.
- Identifying prominent geographic features.
