Predictive Services Discussion: The Four Corners High will reposition over the Tennessee River Valley and will allow for a weak, dry, but broad trough of low pressure to develop over the West. This will allow for slight cooling of temperatures. Widely scattered monsoonal storms will move north from Mexico into New Mexico and Colorado producing scattered, mainly wet storms. Critical fire weather conditions resulting from breezy westerly winds and low humidities will be present across Wyoming and northern Utah. Scattered strong storms will be possible in the muggy airmass over the Lower Midwest. In Alaska, scattered storms will continue across the state as a weak frontal boundary extends southeast into the Interior from the Arctic Ocean.
