

**National Interagency Coordination Center  
Incident Management Situation Report  
Thursday, July 23, 2020 – 0730 MDT  
National Preparedness Level 3**

**National Fire Activity:**

Initial attack activity:	Light (156 new fires)
New large incidents:	8
Large fires contained:	5
Uncontained large fires:***	32
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	3
Type 2 IMTs committed:	5

Nationally, there are 15 large fires being managed under a strategy other than full suppression.

\*\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

### **Great Basin Area (PL 3)**

New fires: 26  
 New large incidents: 2  
 Uncontained large fires: 9  
 Type 2 IMTs committed: 1

**Cottonwood**, Humboldt-Toiyabe NF, USFS. IMT 2 (GB Team 6). Thirty-five miles east of Pahrump, NV. Short grass. Minimal fire behavior with smoldering. Communication infrastructure and structures threatened. Area, road and trail closures in effect.

\* **Antelope**, Boise District, BLM. Thirty miles southwest of Mountain Home, ID. Brush and short grass. Moderate fire behavior with running and flanking. Structures and sage-grouse habitat threatened.

**Cedar**, Elko County. Fifteen miles south of Elko, NV. Timber, brush and short grass. Moderate fire behavior with isolated torching and creeping. Sage-grouse habitat threatened. Reduction in acreage due to more accurate mapping.

**Stewart Canyon**, Ely District, BLM. Fourteen miles east of Alamo, NV. Timber, brush and short grass. Minimal fire behavior with isolated torching, smoldering and creeping.

**Dennis Hill**, Bear River Area, Utah DOF. Started on BLM land 15 miles southwest of Park Valley, UT. Timber, brush and short grass. Moderate fire behavior with backing and smoldering. Structures and sage-grouse habitat threatened.

\* **Osgood**, Humboldt County. Started on private land 15 miles north of Winnemucca, NV. Brush and tall grass. Active fire behavior with running and backing. Structures and sage-grouse habitat threatened.

**Veyo West**, Cedar City Field Office, BLM. One mile west of Veyo, UT. Timber, brush and short grass. Minimal fire behavior. Numerous structures threatened.

**Big Hollow**, Northeast Area, Utah DOF. Three miles south of Heber, UT. Chaparral, brush and short grass. Minimal fire behavior with smoldering.

**Howell Peak**, Richfield Field Office, BLM. Forty-one miles west of Delta, UT. Brush and short grass. Minimal fire behavior with smoldering. Last narrative report unless significant activity occurs.

**Turkey Farm Road**, Southwest Area, Utah DOF. Four miles north of St. George, UT. Timber, brush and short grass. No new information. Last report unless new information is received.

**Predictive Services Discussion:** An upper low will slowly move over central California and into Nevada as it weakens overnight. A surface cold front will push south and east across much of the Pacific Northwest and into northern California. Widely scattered storms will redevelop across northern Nevada, eastern Oregon, Idaho, much of Montana, and western Wyoming. Severe thunderstorms are possible over the northern Rockies, especially from central Idaho through southwest Montana. Scattered wet, monsoonal storms will continue to develop across the Four Corner states. Elevated to critical fire weather conditions for breezy winds and low RH are expected across southern/eastern Nevada into western Utah. A stalled cold front will linger from the Northeast through the mid-Atlantic and westward into mid-Mississippi River Valley. Scattered wet storms are expected to produce abundant lightning and heavy downpours. A tropical system is likely to continue moving westward across the northern-northwestern Gulf of Mexico.

*This Day in History is a brief summary of a powerful learning opportunity and is not intended to second guess or be judgmental of decisions and actions. Put yourself in the following situation as if you do not know what the outcome will be. What are the conditions? What are you thinking? What are YOU doing?*

## Elk Fire – Helicopter Accident

### Incident Summary:

July 23, 2007 California – A handcrew is assigned to mop up on the Elk Complex. The crew's superintendent requests blivets through the division supervisor (DIVS) to support the operation. A medium helicopter will longline the blivets.

**Two days before the accident** - The DIVS anchors a fluorescent panel to the ground (used for indicating landing and drop zones) for the handcrew to use. The terrain in the area contains steep slopes and trees from 75 to 200 feet tall.

**Day before the accident** - The crew prepares for blivet delivery. The location of the panel remains as placed by the DIVS. The helicopter makes the blivet drop close to the panel. The crew member who is marshaling warns the pilot about the proximity of one tree located to the right and upslope of the panel. Concerned with their own safety, two ground crew members distance themselves from the blivet drop site. The division safety officer visits the site after the blivet delivery. There was no discussion regarding the drop zone location or recognized hazards. At the After Action Review (AAR) in camp that evening, there is no mention of it. Additional blivets and back haul are requested by the crew superintendent through the DIVS for the following day.

**Day of the accident** - The pilot is informed that he would be delivering more blivets to the same drop zone. Two crew members, not the same from the previous day, staff the drop site. The panel remains in the same location as the previous day. Though the helicopter is equipped with a 150 ft longline, the marshaller communicates with the DIVS that a longer longline is recommended. By the time the recommendation is transmitted to the helibase, the helicopter is en route with blivets. Due to radio traffic, the marshaller and pilot did not communicate until the helicopter is on final approach to the drop site. Crew members witness the helicopter drift to the right as the blivets were set down, and watched the main rotor striking the tall tree.

The longline and the blivets remain attached as the helicopter turns left and flies downhill, impacting trees as it falls to the ground. The helicopter is destroyed. Though crew members attempt to provide assistance, the pilot is killed.

### Discussion Points:

**Lookouts** – In medium helicopters many pilots fly external load missions from the left seat, leaning left out the bubble window. This decreases the pilot's ability to see to the right of the aircraft. As ground personnel working with helicopters, you may have a view of hazards that the pilot does not.

- *If you are giving a new pilot a briefing about hazards in your area, what will your emphasis points be?*

**Communications** – During a post-accident interview, two crew members stated that they were so concerned about the potential for an accident that they briefed each other three times on what action would be taken in the event of an accident.

- *Discuss some of the reasons that people do not speak up when they see something wrong.*
- *During your work today, you may only get one chance to communicate a hazard before an accident happens. Identify how you and your crew will combat the reluctance to verbalize hazards.*

There was a wider open spot a short way down the line that would have made a better drop site, but the DIVS had placed the panel in a convenient spot for the crews and did not communicate that he did not intend it to be the drop site for the blivets.

- *Discuss how your crew leader wants crew members to speak up with questions, ideas, and solutions.*

**Escape Routes** – We strive to work as safe as possible, but when things go wrong we need a way out. Just as with fire and felling, pilots in aircraft and the ground crews working with them need to establish escape routes for the aircraft and the ground crew.

**Safety Circle** - The helicopter's main rotor impacted the top 15 feet of a 165-foot tree. This means the helicopter's safety circle was not big enough to remain clear of hazards. (A safety circle is generally recognized as 1 ½ times the rotor diameter and is used for keeping a safe distance from hazards both on the ground and in-flight).

- *Using your IRPG, identify the minimum size of a safety circle for a medium helicopter.*
- *What are some ways to estimate the height of a tree?*
- *What are some options you have as a ground crew to improve a drop site with a hazardous tree?*
- *What are some options you have as a ground crew if you have an unsafe condition at the drop site and the helicopter is enroute?*
- *What immediate actions do you take as a ground crew at a drop site if the helicopter is getting too close to a hazard?*
- *Could asking the pilot to do a recon of the drop site have potentially changed the outcome of this accident?*
