Predictive Services Discussion: Breezy and dry conditions will develop again across the Pacific Northwest, northern California, and northern Nevada as another weak cold front moves east into the Northern Rockies. Scattered wet storms are expected across Montana, Wyoming and across the Four Corner States as the passing front draws moisture northward. Temperatures will be near average across the northwestern states and above average across the Southwest. Hurricane Genevieve will move north along the coast of Baja California and begin to weaken. In the East, the trough of low pressure over the Mississippi River Valley will strengthen along the northern Gulf Cost and will allow for scattered storms to develop from Florida to as far north as Maryland. Breezy westerly winds with cool temperatures are expected across New England as a lowpressure area tracks east from Hudson Bay.

## Taking A Nap Near The Fireline

Firefighting is often exhausting work and firefighters can find themselves needing to sleep while on the fireline. Before pausing to rest, firefighters must weigh the following considerations:

- Are lookouts posted? Discuss who that lookout can be. Can the lookout on the knob across the draw watch over you, or does it need to be your partner on the fireline alternating rest times?
- Is the area free of hazards (falling snags or rolling materials, etc.)? Discuss what you need to do to create a safe resting area.
- Are you still within agency work and rest guidelines? Review what these guidelines are.
- Does your crew need a break? Have they been pushed too hard? Talk about situations where you need to simply take yourself and/or your crew off the fire for uninterrupted rest.
- To reduce risks:
- Keep lookouts posted; rotate lookouts.
- Communicate crew conditions and status to supervisor or chain-of-command contact.
- Have firefighters discuss ways that they find to rest on the fireline and suggestions for methods to alternate shifts for more effective firefighting.
