Predictive Services Discussion: A weaker version of the Four Corners High will strengthen over the Interior West and promote warm and dry conditions across the West except along the Mexican Border where scattered monsoonal storms will continue. Temperatures West-wide will be near to slightly above average, and winds will be mostly diurnally-driven. Scattered storms will be possible across the central and southern Great Plains and across the Southeast where a weakening frontal boundary slowly pushes east. A line of strong storms will move east from the northern Great Plains into the Upper Midwest by late in the afternoon. Hurricane Genevieve will weaken as it moves north along the coast of Baja California and could spread some convection into extreme Southern California by late in the day.

## Constructing Line Without A Safe Anchor Point <br> Operational Engagement

When deciding where to build fireline, the following considerations must be weighed:

- Can you hold the line without the fire hooking under/around you? How do you protect against losing the line and ensure your safety if there is a danger of the fire hooking around you?
- Are there adequate safety zones and escape routes? Review what constitutes an adequate safety zone and escape route. Who has the responsibility to designate them and continue to make sure they are adequate?
- Can you develop your starting point into an anchor point? List some good anchor points. Describe how you would develop your starting point into an anchor point.
- Have you posted good lookouts? Where should the lookout(s) be posted? Who can be a lookout?
- Do you have good communications? Who do you need to be in contact with? If the communications are not good, what can you do to improve them?
- To reduce the risks, start the line in another location. Talk about fires where you have had to relocate the line because your anchor point did not hold the fire.
- Do you have a lookout posted? Can they see the main fire?
- How have you mitigated Watchout Situation \#8?
