Predictive Services Discussion: A weak dry front will move across the Pacific Northwest into the Northern Rockies brining breezy and dry conditions. Very isolated storms will be possible along the Continental Divide in Montana. While winds will be gusty and relatively strong in wind-prone areas, afternoon humidity levels may be slightly elevated enough to offset some of the fire weather-related impacts. The Four Corners High will amplify slightly across the Great Basin and lead to another very warm day with very low afternoon humidities. Monsoonal moisture will remain wrapped around the south end of the high across New Mexico and Arizona. However, the moisture feed into the monsoon will remain weak. Tropical Storm Genevieve will continue to move north and will reintroduce widely scattered storms into southern California late in the day. Developing storms should be wet. The East will remain under the influences of a weak upper level trough which will keep scattered thunderstorms around during the afternoon and temperatures near average.

# Thunderstorm Safety 

Weather - Fire Behavior Category

Thunderstorms cause significant hazards for wildland firefighters, including downbursts that can cause extreme fire behavior and lightning. When thunderstorm development is likely, lookouts should be posted and aware of signs of a developing storm. A sudden reversal in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature may note the mature stage of a storm. Heavy rain, hail, and lightning occur only in the mature stage of a thunderstorm. During a storm, use the following guidelines:

- Do not lie down.
- The best position is sitting on the pack or crouching with feet close together.
- Avoid sitting directly on the ground, if possible; but, if necessary, keep feet and butt close together.
- Avoid grouping together. Keep a minimum of 15 feet between people when possible.
- Removing calk boots will not provide safety if stocking covered or bare feet are then in contact with the ground - don't bother!
- "Stay out of dry creek beds" is correct for flash floods, but has nothing to do with lightning.
- Handheld radios (with short rubber antennas) or cell phones are safe to use. Communication is vital to crew safety. Do not use land line radios, or radios with elevated antennas.
- Wide, open spaces are better than trees or clumps of trees in the vicinity. Ridge tops, etc., should be avoided.
- If you feel the hair on your arms or head "stand up," there is a high probability of a strike in the vicinity. Crouch or sit on a pack.
- Put down all tools.
- Take shelter in vehicles if possible.
