Predictive Services Discussion: Nocturnal convection from the previous night will continue across southeastern Oregon, northern Nevada, and southern Idaho during the early morning hours. The redevelopment of scattered storms will occur during the afternoon across the Four Corner states, the Great Basin, Wyoming, and the Northern Rockies. Storms should be mostly wet. There are some concerns that debris flows will be possible beneath storms over Colorado and Arizona in the complex terrain since most storms in these areas will be capable of producing around . 5 inches of rain. In the East, the remnants of Marco will begin to move off to the northeast, missing West Texas. Hurricane Laura will begin to make her approach to the northern Gulf coast preparing to make landfall late Wednesday night.

## SAFECOMs

Aviation Category

## What the SAFECOM system IS

The Aviation Safety Communiqué (SAFECOM) AMD-34/FS-5700-14 should be used to report any condition, observation, act, maintenance problem, or circumstance with personnel or the aircraft that has the potential to cause an aviation-related mishap. SAFECOMS are a tool used to identify, document, track, and correct safety related issues.

## What the SAFECOM system IS NOT

- NOT intended for initiating punitive actions,
- NOT to be used as a complaint system or for personal attacks,
- NOT used by contracting officers for contract evaluations/award purposes,
- NOT a substitute for "on-the-spot" corrections to a safety concern, and
- does NOT replace the requirement for initiating an accident or incident report.

SAFECOMs provide the necessary feedback for development of the following communication tools:

- Accident Prevention Bulletins
- Lessons Learned
- Safety Alerts
- Technical Bulletins
- Airwards
- Information sharing Memos
- Maintenance Deficiencies (ADs, SBs, etc)
- Safety Trends
- Training Needs
