Predictive Services Discussion: Drier conditions are expected across the West Coast and much of the Great Basin as an upper-level trough moves through the Intermountain West. Thunderstorms are likely from the Northern Rockies through Colorado and into portions of the Four Corners. Thunderstorms are likely across the northern Plains and through the Great Lakes with potentially severe storms across the northern Plains. A cold front will slide southward down the northern and central High Plains. Hurricane Laura will impact the Gulf Coast and through the Mid Mississippi Valley after it makes landfall overnight. Heavy rain and flooding are likely with an isolated tornado threat as well. Widespread rain is likely across the Tennessee and Ohio Valleys.

Terrain And Fuels Make Escape Difficult<br>Operational Engagement Category

When fighting wildland fires, it is often easy to get committed to areas that put you in Watch Out Situation \#17. As firefighters progress along the fireline, it is imperative to constantly keep the following considerations in mind:

- Retreat times should be based on the slowest member of the crew.
- Does the crew's condition allow for fast travel?
- Discuss physical and mental conditions that could interfere with a crew's ability to travel quickly.
- Will you get adequate warning to make it to your safety zone? Who will you rely on to warn you? How will you ensure that everyone gets the word?
- Can escape routes be improved to make travel to safety zones faster? Are escape routes marked?
- Review what you have done on past fires to locate, mark, and improve escape routes.
- Will posting more lookouts give adequate warning? Talk about situations where there was more than one firefighter assigned to be lookout.
- To reduce the risks:
- Consider other tactics that will allow you to be in a safer location. Review fires where you have had to change tactics because escape to safety zones was not adequate.
