Predictive Services Discussion: A strong, wet cold front will move south from Alberta and Saskatchewan into the Northern Rockies and Wyoming by late afternoon bringing rain, high elevation snow, and noticeably cooler temperatures along with windy conditions. Wetting precipitation is expected with the front's passage. To the west of the front across the Pacific Northwest and northern California, northerly pressure gradients will strengthen greatly during the late afternoon. This will lead to a north wind event across northern California overnight. Conditions along the West Coast in California and Oregon will remain hot, dry, and unstable, but not to the degree observed previous days as the high pressure ridge weakens and begins to retreat further to the west. In the East, a passing cold front will bring showers and storms to areas along the Canadian Border into lowa. Across the Southeast, temperatures will cool slightly as the large trough begins to dip further south.

## Ash Pit Hazards

Miscellaneous Fireline Hazards

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when a ground fire consumes underground fuels creating an empty space that is imperceptible from the surface.

- Environmental factors that increase the risk of ash pit formation after a wildfire:
- Extensive root systems of trees and shrubs.
- Deep duff or peat, the organic layer covering mineral soil.
- Landscapes that have once been cultivated or manipulated by heavy equipment, old dozer piles, sawmills, timber sale yards, or decking areas.
- Small rodent holes that have become filled with decadent, combustible debris, beaver holes near dams and stream beds, badger and coyote dens.
- White ash is sometimes an indicator of ash pits as are swarms of hovering insects.
- With the sun behind the suspected ash pit, look for small nearly translucent smokes that dissipate quickly above the ground.
- Ash pits often give off the smell of incomplete combustion or of creosote burning.
- Mitigation measures to consider:
- Identification of high-risk landscape.
- Identify and flag all hazardous discovered ash pits.
