**Predictive Services Discussion:** A cold front will stall off the West Coast while pushing into northern Mexico and stretching northeast through the southern Plains into the Ohio Valley. Precipitation will over spread the Southern Rockies and southern and central Plains with snow over the higher elevations. Gusty offshore winds amid a dry airmass will continue across the West Coast with critical fire weather conditions expected. Dry and breezy post-frontal conditions will continue across portions of the Great Basin and into the Desert Southwest as well. Thunderstorms are likely along the Gulf Coast and through portions of the Southeast into the Mid-Atlantic, especially near the coast.

## Attempting A Frontal Assault On A Fire

*Operational Engagement Category*

Attempting a frontal assault on a fire is recognized as [Watchout Situation #10](#) and is a potentially dangerous tactic.

If your tactics include a frontal assault, the following checklist must be adequately addressed before engaging the fire:

- Has the fire been scouted and sized up? Who will scout and size up a fire and what are they looking for?
- Is your position defensible? List what makes a firefighter's position defensible. (Anchor points, safety zones, escape routes, etc.)
- Are escape routes and safety zones adequate? Review what constitutes an adequate safety zone and escape route.
- Do you have an anchor point? How would you establish an anchor point for a frontal assault on a fire?
- Do you have adequate resources to complete the assault? Discuss things you need to consider; for example, if the frontal assault fails, do you have backup?
- Are you informed on strategy, tactics, and hazards? Consider what could happen if someone has a different approach than you; i.e., the IC has a burnout operation planned while you are attempting frontal assault.
- Is the terrain favorable to holding the fire? Discuss ways the terrain will influence where you will make a stand.
- Are you relying on aircraft for support operation? Any operation, especially frontal assault, should not need air resources to be safe.

In order to reduce the risks, reassess your tactics, post lookouts, identify situations in which firefighters may be enticed to attempt frontal assault on a fire. Review why this may or may not be a good idea.
