Predictive Services Discussion: The upper low will remain just off the west coast, allowing high pressure to remain in place across the Intermountain West. Breezy winds and critically dry relative humidity will develop in the afternoon across portions of northeast California, eastern Oregon, and the northern Great Basin. Isolated critical fire weather conditions are possible across northeast California. Periods of light rain showers are expected across far western Washington and Oregon. Dense smoke will continue to impact much of the western US.

Frequent Spot Fires Across The Line<br>Weather - Fire Behavior Category

This watchout situation clearly indicates how much potential your fire has for rapid, uncontrolled growth. Consider the following questions if you are getting spot fires across your line:

- Can you handle increased spotting? List some ways you can keep ahead of spot fires (gridding the green, lookouts, etc.)
- What is your probability of ignition doing? Is it increasing or decreasing?
- Do you have a plan for long-range spotting? In what fuel type and under what conditions will you likely have long-range spotting? What types of plans can you think of for handling long-range spotting?
- Is help available if necessary? What kinds of resources will you have in place, or order, to handle spot fires?
- If fire behavior increases, is your position still defensible? Discuss what type of action you might take if a spot fire takes off.
- Do you have more than one safety zone in case one gets cut off? Describe how you might have multiple safety zones.
- Do the primary lookouts have a good view of the situation? Discuss who might be acting as a lookout (e.g., crew member, air resources, supervisors, etc.) and how you will get good information from that person. (Are you relying on an air attack that is busy with airtankers?)
- Where are you in the burning period? Talk about how your tactics may vary from finding spot fires early in the day to later into the evening. Review Probability of Ignition (PIG) and what it can tell you about spotting potential.
- To reduce the risk, be ready to retreat. Keep your guard up even if spotting has not occurred for a few hours. Review fires where you have had frequent spot fires and what you learned about controlling them.
