Predictive Services Discussion: The greatest risk for large fire activity shifts back to Northern California as offshore winds are expected to develop across the region towards the evening. Any new fires in the region today will be challenged by strong overnight gusts that are likely to strengthen even more on Sunday when humidities are forecast to plummet to $10-15 \%$. Still windy and dry conditions are expected today for the plains of Montana, Wyoming, and Colorado. Hot and dry conditions continue for Southern California and Southwest with more rainfall likely in the Northwest and western portions of Northern Rockies. Severe thunderstorms will be possible near the Great Lakes that producing damaging hail, wind, and possible tornadoes.

# In Country Not Seen In Daylight 

Operational Engagement Category

Often, firefighters arrive on a fire after dark. This is recognized as Watch Out Situation \#2. Before safely fighting fire, in country not seen in daylight, firefighters must be able to answer the following questions:

- Can the resources you are replacing give you a thorough briefing? Identify whom you might get information from. Can you meet up with the departing overhead/resource leaders?
- Can you observe the area/use scouts? List ways you could observe the area you need to work.
- Have escape routes and safety zones been thoroughly scouted and marked for night use? Talk about what constitutes an escape route and a safety zone; who would identify them; and in what ways might they be marked.
- Have potential dangers been located; can they be mitigated? What are the dangers associated with Watch Out Situation \#2? How can they be worked around?
- Reduce the risks by:
- Posting lookouts.
- Checking communications.
- Retreat if you have doubts about your escape routes or safety zones, or the situation becomes too complex. Give examples of arriving on a fire after dark and what was done to allow you to fight fire safely in country not seen in daylight.
- Identifying prominent geographic features.
