Predictive Services Discussion: Critical fire weather will continue for Northern California and portions of Southern California due to breezy offshore winds and very hot/dry conditions. Offshore winds are likely west of the Cascade Crest in Oregon as well, although humidities generally stay above critical values. Gusty winds are expected for much of the Great Plains and low humidities will result in elevated fire weather concerns for eastern Wyoming and Colorado as well as the Texas and Oklahoma Panhandles. Very dry conditions continue for the Southwest and Great Basin. Little to no measurable precipitation is expected across the West.

LEAD Time

Developing a Learning Organization

Leadership Category

Leaders evaluate performance at all levels to understand the causal factors of successes and failures. All those involved learn incrementally, applying today's lessons to the next assignment. This focus on continuous improvement brings with it a responsibility to share lessons learned throughout the organization. In a learning organization, leaders treat honest mistakes as opportunities to learn and do better next time. Understanding that failure is a part of learning, they establish command climates in which followers are motivated by a desire to succeed rather than fear of failure. At the crew level, conducting regular After Action Reviews is one of the most powerful tools a leader has for building effective and cohesive teams.

Discussion Points:

- Discuss the relationship between developing a learning organization and safety.
- What happens when honest mistakes are punished rather than used as a learning opportunity?
- How are mistakes and failure dealt with within your crew / organization?
- What was your crew's/organization's most recent learning moment?
