Predictive Services Discussion: Split upper-level flow will lead to an upper-level trough moving into central and southern California and another upper-level trough strengthening as it approaches the Pacific Northwest. Precipitation will begin in western Oregon and Washington this afternoon with intensity increasing overnight. Onshore flow will increase across the West Coast bringing higher humidities, but dry and breezy conditions will develop across parts of the Intermountain West onto the High Plains. Hurricane Delta will make landfall later today and this evening in Louisiana with major impacts due to wind damage and flooding from east Texas through the central Gulf Coast and Lower Mississippi Valley.

## Aviation Watch Outs

Aviation Category

As part of risk management, especially during high activity fires, each aviation manager and employee should be asking questions.

- Is the flight necessary?
- Who is in charge?
- Are hazards identified and known?

Flight Hazards: Have they been identified and assessed? Have the pilots been informed?

- Should the operation or the flight be stopped due to a change in conditions? Consider the following:
- Radio communications.
- Environmental conditions - weather, visibility, terrain, elevation, temperatures.
- Mission priorities.
- Successful mission completion probabilities.
- Is there a better way to do it?
- Is there pressure to complete a mission at all costs?
- Can you justify your actions?
- Is the mission airspace confined or congested?
- Multiple aircraft.
- Mixed types of aircraft.
- Poor visibility.

Do you have an escape route?

- Are any guidelines being ignored or policies being broken?
- Are communications getting tense?
- Are you deviating from the assigned operation or flight?
