# National Interagency Coordination Center <br> Incident Management Situation Report <br> Friday, October 30, 2020 - 0730 MDT <br> National Preparedness Level 2 

National Fire Activity:
Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires:***
Light (62 new fires)
0
7

Area Command teams committed:2

NIMOs committed:
2
Type 1 IMTs committed: 5
Type 2 IMTs committed:

Nationally, there are 17 fires being managed under a strategy other than full suppression.
***Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.
Link to Understanding the IMSR.
NIMO (Houseman) has been assigned to COVID-19 support at Forest Service headquarters in Washington, D.C.

NIMO (Reinarz) has been assigned to provide wildland fire support to California.

## Southern California Area (PL 2)

New fires:19

New large incidents: 0
Uncontained large fires: 7
Area Command: 1
Type 1 IMTs committed: 2
Type 2 IMTs committed: 2
Area Command Team (Sexton) has been mobilized to support planning operations in California.
Silverado, Orange County Fire Authority. IMT 1 (Cal Fire Team 6). IMT is also managing the Blue Ridge fire. Nine miles east of Irvine, CA. Chaparral, brush and tall grass. Minimal fire behavior with backing, creeping and smoldering. Numerous structures. Road closures in effect. Evacuations have been lifted.

Blue Ridge, Orange County Fire Authority. One miles north of Corona, CA. Brush and tall grass. Minimal fire behavior with smoldering. Infrastructure threatened. Trail closures in effect.

Creek, Sierra NF, USFS. Transfer of command from IMT 1 (CA Team 1) to IMT 2 (AK Black Team) will occur tomorrow. Thirty-five miles northeast of Clovis, CA. Timber, chaparral and tall grass. Active fire behavior with backing, torching and creeping. Numerous structures threatened. Area, road and trail closures in effect.

SQF Complex, Sequoia NF, USFS. IMT 2 (EA Gold Team). Thirty-three miles east of Porterville, CA. Timber and chaparral. Active fire behavior with flanking, backing and single tree torching. Numerous structures threatened. Area, road and trail closures in effect.

Coleman, Los Padres NF, USFS. Thirteen miles southwest of King City, CA. Brush and tall grass. Minimal fire behavior with smoldering. Area, road and trail closures in effect.

El Dorado, San Bernardino Unit, Cal Fire. Three miles northeast of Yucaipa, CA. Timber, chaparral and brush. Minimal fire behavior with creeping and smoldering. Numerous structures threatened. Area and trail closures in effect.

Moraine, Sequoia \& Kings Canyon NP, NPS. Five miles northeast of Kanawyers, CA. Timber and brush. Moderate fire behavior with flanking, creeping and isolated torching.

***Prescribed fire acres are for reference only and may not reflect the most up-to-date information.
***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.
Predictive Services Discussion: An upper-level shortwave trough will move over the Pacific Northwest and Northern Rockies as an upper-level trough exits the eastern US. Scattered light precipitation is expected in western Washington, northwest Oregon, and portions of the Idaho Panhandle and northwest Montana. Precipitation will linger from the Mid-Atlantic through the Northeast behind the cold front. Otherwise, dry conditions will continue across much of the CONUS today with mostly above average temperatures in the West and near to below average temperatures from the Plains to the East Coast.

## Fire Shelter Deployment Site Selection

Operational Engagement Category

A primary objective of every operational fire plan is to keep firefighters out of entrapment situations. However, firefighters must always be prepared to deploy their fire shelters. The key to a successful fire shelter deployment is proper site selection. Consider the following when discussing shelter deployment site selection.

- Pick a site that will keep the fire shelter away from flames and convective heat. The site also should limit the amount of radiant heat that reaches the shelter.
- Select an area with no fuels. If that isn't possible, select a site in light fuels, such as grass, where the flaming front will pass quickly. Clear the site to mineral soil if at all possible. If time is critical, pick a site with the least fuel.
- Pick natural firebreaks (such as wet meadows; creek beds; wet, swampy areas; large rockslides with no fuels). Rough terrain in rockslides may make it difficult to seal the fire shelter to the ground.
- Areas on the lee side of ridgetops and knobs can be effective deployment sites because convective heat and flames will generally continue rising above them.
- Wide areas that have been cleared of fuel, such as dozer lines or roads, can be effective deployment sites. In larger areas, don't let trucks, dozers, and other equipment occupy the best deployment sites.
- Flat areas on slopes, such as benches or road cuts, offer some protection from radiant and convective heat. Level areas like these can keep you under the path of flames and convective heat.
- The ditch on the inside of the road, if free of fuel may be an effective deployment site on a road.
- Consider vehicle traffic.
- Avoid areas that tend to funnel smoke, flames and hot gasses, such as:
- Narrow draws
- Saddles on ridgetops
- Chimneys and chutes
- Know how long it takes to reach your safety zone. Crew supervisors should identify and communicate escape routes and safety zones.
- If you're not in a suitable shelter deployment area, keep escaping while watching for a possible deployment site.
- Ensure sites are clearly identified and marked.
