

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, November 20, 2020 – 0800 MDT  
National Preparedness Level 1**

**National Fire Activity (November 13 – November 20, 2020):**

Initial attack activity:	Light (517 new fires)
New large incidents:	17
Large fires contained:	24
Uncontained large fires:***	16
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	4

Nationally, there are 4 fires being managed under a strategy other than full suppression.

\*\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

\*\*\*Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

**Predictive Services Discussion:** A progressive upper-level pattern will continue over North America for the next week. Persistent ridging over the eastern North Pacific and a resilient Bermuda High will limit troughs digging south over southern California and the far southeast US. Given the forecast trajectory of upper-level troughs, much of California, the Great Basin, the Southwest, the High Plains, and Southeast will remain dry into with above normal temperatures into late next week, although dry cold fronts will decrease temperatures periodically.

Gusty, dry offshore winds are likely across portions of the southern California mountains this weekend and possibly into early Monday. Dry and windy conditions are likely to develop across the High Plains early to mid next week as upper-level troughs move out of the Intermountain West. Some dry and windy conditions are also possible in portions of the Southwest and Great Basin early next week. Wetter, cooler conditions are likely to continue in much of the Pacific Northwest and Northern Rockies for the next week. Rain is likely to spread from portions of the southern and central Plains into the Lower/Mid Mississippi Valleys and much of the eastern US Tuesday – Friday.

## On A Hillside Where Rolling Material Can Ignite Fuel Below

*Operational Engagement Category*

When firefighters find themselves in **Watch Out Situation #13**, they must answer the following questions:

- Can you locate/construct a line to prevent material from rolling below? What do you call line that catches rolling material? Describe how you would construct this type of line and what factors you would have to consider (e.g., slope, fuels, etc.).
- Will you get enough warning of rolling material to prevent being hit by it? Who needs to be watching for rolling material? What kinds of warning systems could you establish?
- Can you see where any material that rolls below you goes and what it does? What can happen when material rolls out of the fire and below you, out of view? What needs to be done to mitigate this danger?
- Is the area free of large amounts of flashy fuels? Review the [Common Denominators of Tragedy Fires](#).
- Is the area free of chimneys, gullies, and steep slopes? Review the [Common Denominators of Tragedy Fires](#).
- Do you have two escape routes so you can go either way? Talk about where your most likely escape routes and safety zones will be when you are on a hillside where rolling material can ignite fuel below.
- To reduce the risks:
  - Post lookouts.
  - Consider locating line in a defensible position.
  - Talk about steep fires where you have had material rolling out below you and how you dealt with it.
