

**National Interagency Coordination Center
Incident Management Situation Report
Friday, March 26, 2021 – 0800 MDT
National Preparedness Level 1**

National Fire Activity (March 19, 2021 – March 25, 2021):

Initial attack activity:	Light (692 fires)
New large incidents:	28
Large fires contained:	33
Uncontained large fires:***	3
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 0 fires being managed under a strategy other than full suppression.

***Uncontained large fires include only fires being managed under a full suppression strategy.

Ten Year Average Acres (2011 – 2020 as of today)	452,788

***Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <https://gacc.nifc.gov/>

Predictive Services Discussion: The broad upper-level trough over the West will weaken and shift eastward over the weekend but will bring snow to portions of the Intermountain West into tomorrow before exiting the region. Upper-level ridging will build into the West before another upper low slides southeast from Alaska along the Pacific Coast before broadening over the West early next week. Due to the trajectory of this upper low, precipitation will likely be confined to the Coast Ranges of Oregon and Washington, Cascades, and northern and central Rockies early to mid-next week. A wet pattern will continue for the eastern US, especially across the Southeast with another round of severe weather likely over the weekend, but most of the Florida Peninsula will remain dry.

Dry and windy conditions will develop from far southeast Arizona into southwest Texas today and continue tomorrow in southwest Texas and southeast New Mexico. Dry northerly and offshore flow is forecast for portions of California early next week with dry and windy conditions overspreading portions of the Southwest and southern

High Plains through mid-next week. Additionally, elevated to critical fire weather conditions are possible across the northern Plains Sunday, Monday, and possibly into mid-week.

LEAD Time

Five Communication Responsibilities

Leadership Category

Fire leaders work to instill the Five Communications Responsibilities in the culture of all crews, teams, and units. These responsibilities are not just tactical tools but apply to the staff and management environment.

In high risk environments, the best level of protection against errors and accidents is effective team communication. Therefore, everyone—regardless of position—has an obligation to communicate critical information.

Fire leaders redeem the Five Communications Responsibilities to enable everyone at all levels to develop good communications practices.

Five Communications Responsibilities:

Brief—use briefings to ensure accurate situation awareness.

Debrief—use After Action Reviews to build accountability and learn from experience.

Acknowledge and understand messages—acknowledge and ensure clarity of received communications on conditions, assigned tasks, intent, and other important information.

Communicate hazards to others—use hazard identification, a key component of risk management, to identify personal, tactical, situational, political, or organizational hazards. Good leaders ensure that team members are vigilant for hazards and communicate identified hazards effectively.

Ask if you don't know—guard against making false assumptions when the picture is not clear.

Discussion Points

- What makes a good briefing?
- Describe a time where a hazard was not communicated to you?
- Why do or don't you ask if you don't know?
