# National Interagency Coordination Center <br> Incident Management Situation Report <br> Friday, April 23, 2021 - 0730 MDT <br> National Preparedness Level 2 

National Fire Activity:
Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires: ***
Area Command teams committed:
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:

Moderate (284 fires)
3
1
6
0
0
0
2

Nationally, there is one fire being managed under a strategy other than full suppression.
***Uncontained large fires include only fires being managed under a full suppression strategy.

## Link to Geographic Area daily reports.

Link to Understanding the IMSR.
This report will be posted Monday - Friday at 0730 Mountain time unless significant activity occurs.
IMT 2 (NW Team 7) has been assigned in support of Oregon state COVID-19 response operations.
IMT 2 (NW Team 6) has been assigned in support of Oregon state COVID-19 response operations.

***Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.
***Additional wildfire information is available through the Geographic Areas at https://gacc.nifc.gov/

## Predictive Services Discussion:

Elevated to critical fire weather conditions are expected across northern and eastern Arizona, much of New Mexico, and southwest Texas, although recent precipitation in portions of northern Arizona into northwest New Mexico may mitigate these conditions. Dry conditions will continue across the South, especially from central Alabama stretching east and north through Georgia into the Carolinas, and up the Atlantic Coast into New England. Lingering precipitation will continue across much of the Rockies with severe weather and potential heavy rain from central and eastern Oklahoma and Texas to the Lower Mississippi Valley. Isolated embedded thunderstorms are also possible across northern New Mexico into Colorado, but most likely affecting higher elevations. A strong upper-level ridge will remain over Alaska leading to above normal temperatures across the state.

Roadside Incident Response
Vehicles/Roads Category

Nationally, the number of injuries and fatalities among emergency responders who are responding to roadside incidents is increasing. Although most wildland fires occur in remote areas, there are situations where wildland fire personnel are responding to fires along rural country roads, backcountry roads, or major highways; where risk still exists for firefighters.

## Considerations when responding to fires and other incidents along roadsides:

- Firefighter and public safety will always be the number one priority.
- Utilize Lookouts, Communications, Escape Routes, and Safety Zones in all incident activities.
- Personal Protective Equipment (PPE) is to be used on all incidents.

## Upon Arrival at the Scene

Size up the incident - see Incident Response Pocket Guide, PMS 461, Sizeup Report on the inside front cover.

- What has happened?
- What is happening?
- What will or could happen?
- Is this a hazardous materials situation?

Apply the Risk Management Process

- See the Incident Response Pocket Guide, PMS 461, Risk Management section under Operational Engagement (green).

## Tactical Considerations:

- Anytime traffic flow is affected by the incident, contact the jurisdictional law enforcement agency for assistance.
- Conduct all operations as far from traffic lanes as possible to provide for crew and public safety.
- Park units on the same side of the roadway whenever possible to avoid traffic congestion.
- Personnel should not exit the fire apparatus until instructed to do so by the module leader.
- Exit the fire apparatus away from the roadway or where hazard exposure is minimized.
- Exit the fire apparatus with full PPE.
- Post a lookout to watch for and control oncoming traffic.
- Utilize forward and rear spotters when visibility is impaired or road conditions warrant.
- Utilize road flares or other traffic warning signs whenever possible.
- If equipment needs to be removed from the traffic side of the apparatus, one person will retrieve the equipment and a lookout will watch for oncoming traffic.
- Engine operators will operate pumps from the non-traffic side or from the cab of the apparatus when possible. Keep all hose, fire tools, and equipment out of traffic lanes when possible.
- During night operations, utilize reflective clothing, vests, and other safety equipment as necessary.
- All emergency responses on roadways will be concluded as quickly as possible to reduce personnel exposure.
- Cancel or demobilize unnecessary apparatus as soon as possible.

Note: Each emergency vehicle operator will follow their state laws and agency policies governing the operations of emergency vehicles.
