## National Fire Activity:

Initial attack activity:
New large incidents:
Large fires contained:
Light (147 fires)

Uncontained large fires: ***
,

Area Command teams committed: 7

NIMOs committed: 0

Type 1 IMTs committed: 0

Type 2 IMTs committed:
2

Nationally, there are 2 fires being managed under a strategy other than full suppression.
***Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.
Link to Understanding the IMSR.
This report will be posted Monday - Friday at 0730 Mountain time unless significant activity occurs.
IMT 2 (NW Team 6) has been assigned in support of Oregon state COVID-19 response operations.

## Southwest Area (PL 3)

New fires: 3
New large incidents: 0
Uncontained large fires: 3
Type 1 IMTs committed: 2
Three Rivers, Lincoln NF, USFS. IMT 1 (SW Team 2). Twelve miles northwest of Ruidoso, NM. Timber. Minimal fire behavior. Numerous residences threatened. Area, road and trail closures in effect. Precipitation occurred over the fire area yesterday. Reduction in acreage due to more accurate mapping.

Flag, Colorado River District, BLM. IMT 1 (SW Team 1). Twelve miles southeast of Kingman, AZ. Chaparral and timber. Minimal fire behavior with creeping and smoldering. Numerous residences threatened.
Evacuations, area, road and trail closures in effect.
Bonito Rock, Fort Apache Agency, BIA. Fifteen miles southeast of Whiteriver, AZ. Timber and brush. Minimal fire behavior with creeping and smoldering. Road closures in effect. Precipitation occurred over the fire area yesterday.

***Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.
***Additional wildfire information is available through the Geographic Areas at https://gacc.nifc.gov/
Predictive Services Discussion: Above average temperatures will continue across the West with an upperlevel ridge over the region. An upper-level shortwave trough will flatten the ridge over southwest Canada and the Northern Rockies with stronger downslope westerly winds expected across central and eastern Montana into the western Dakotas and gusty pre-frontal southerly winds across the Dakotas as well. This will result in critical fire weather conditions across much of these areas. Dry and breezy conditions are also expected across the western Great Basin due to a combination of downslope flow and a cold frontal passage. A strong upper low will move southeast from the Great Lakes across the Northeast and Mid-Atlantic with an associated cold front pushing through these regions. Strong northwesterly winds will accompany the cold frontal passage with elevated to critical fire weather conditions expected from New Jersey southward into the Carolinas with elevated significant fire potential in parts of the Great Lakes.

Constructing Line Without A Safe Anchor Point<br>Operational Engagement Category

When deciding where to build fireline, the following considerations must be weighed:

- Can you hold the line? How do you do so and ensure your safety if there is a danger of the fire hooking under/around you?
- Are there adequate safety zones and escape routes? Review what constitutes an adequate safety zone and escape route. Who has the responsibility to designate them and monitor their continued suitability?
- Can you develop your starting point into an anchor point? List some effective anchor points. Describe how you would develop your starting point into an anchor point.
- Have you posted lookouts? Where should they be posted? Can they see the main fire? Describe the qualities of a skilled lookout?
- Do you have effective communications? Who do you need to be in contact with? If there are problems with communications, what can you do to improve them?
- To reduce risk, evaluate several locations before making a decision. Talk about fires where you have had to relocate the line because your anchor point did not hold the fire.
- How have you mitigated Watch Out Situation \#8 in the past?
