

**National Interagency Coordination Center  
Incident Management Situation Report  
Thursday, June 10, 2021– 0730 MDT  
National Preparedness Level 2**

**National Fire Activity:**

Initial attack activity:	Unknown
New large incidents:	5
Large fires contained:	2
Uncontained large fires: ***	16
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	4

Nationally, there are 7 fires being managed under a strategy other than full suppression.

\*\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

### **Southwest Area (PL 4)**

New fires: UNK  
New large incidents: 0  
Uncontained large fires: 6  
Type 1 IMTs committed: 1  
Type 2 IMTs committed: 1

**Telegraph**, Tonto NF, USFS. IMT 1 (SW Team 2). Five mile southeast of Superior, AZ. Grass and brush. Active fire behavior with flanking. Numerous structures and energy infrastructure threatened. Evacuations, area, road and trail closures in effect.

**Mescal**, Gila District Office, BLM. IMT 2 (SW Team 5). Twelve miles northeast of Hayden, AZ. Grass, chaparral and brush. Moderate fire behavior with single tree torching. Several communities and numerous structures threatened. Evacuations, area and road closures in effect.

**Wolf Draw**, Santa Fe NF, USFS. Eleven miles northwest of Regina, NM. Timber. Minimal fire behavior with smoldering and creeping.

**Slate**, Coconino NF, USFS. Twenty-three miles northwest of Flagstaff, AZ. Chaparral and timber. No new information.

**Thompson Canyon**, Socorro District, New Mexico DOF. Fifteen miles west of Cliff, NM. Timber and brush. No new information.

**Dog**, Guadalupe Mountains NP, NPS. Thirty-four miles southwest of Whites City, NM. Timber and grass. No new information. Last report unless new information is received.

\*1 Hectare = 2.47 Acres

**Predictive Services Discussion:** An upper-level trough will start moving onshore over the West Coast track to the northeast with an upper high strengthening over northern Mexico into southwest Texas. A cold front will push east across Utah and Wyoming with dry and windy conditions along and ahead of it across the eastern Utah, the Four Corners region, western Colorado, and central Wyoming. Isolated to scattered thunderstorms are likely from far eastern Oregon through the Northern Rockies with severe weather forecast over the northern Plains. Well above average temperatures are expected across the northern Plains into the Upper Midwest and Great Lakes. Showers are also likely across western Washington and Oregon into far northwest California. Isolated showers and thunderstorms are possible over parts of Alaska, but much of the state will remain dry.

# Hazard Mitigation Through Risk Management

Operational Engagement Category

Risk management doesn't get in the way of doing the mission – it is the way we do the mission. The risk management process assists in ensuring that critical factors and risks of the fireline work environment are considered during decision-making. Good risk management utilizes a five-step process:

## ● Step 1 – Situational Awareness:

- Obtain information.
- Scout the fire.
- Identify hazards.
- Consider all aspects of current and future situations.
- Consider known historical problem areas (apply local area information from the Fire Danger PocketCard).
- Recognize the need for action.
- Demonstrate ongoing awareness of fire assignment status.
- Note deviations.
- Attempt to determine why any discrepancies exist before proceeding.

## ● Step 2 – Hazard Assessment:

- Assess hazards to determine risks (e.g., fire behavior, snags, unburned fuels, work/rest).
- Use the Look Up, Down, and Around and the Tactical Watch Outs (both located in the [Incident Response Pocket Guide \[IRPG\], PMS 461](#)) to identify high-risk tactical hazards.
- Assess the impact of each hazard in terms of potential loss, cost, and mission/operational degradation based on probability and severity (probability: how likely an event will occur; severity: consequences if the event occurs). Keep in mind that increased exposure time increases probability.

## ● Step 3 – Hazard Control:

- Determine the best approach to mitigate or control the risk based on the hazards assessed.
- Establish controls (e.g., anchor point, Lookouts, Communications, Escape Routes, and Safety Zones [LCES], utilize downhill checklist, limit exposure time).
- As control measures are developed, reevaluate each risk until it is reduced to a level where benefits outweigh potential costs.

## ● Step 4 – Decision Point (decision to accept or not accept the risks associated with an action):

- Ask yourself: (1) are controls in place for identified hazards, (2) are tactics selected based on expected fire behavior, and (3) are instructions given and understood?
- Make certain the decision is made at the appropriate level. If not, elevate to a higher level.
- Reject the action if the risk is unacceptable.

## ● Step 5 – Evaluation:

- Ensure controls are implemented and accomplished to standards.
- Supervise/evaluate the effectiveness of controls and decisions. Monitor the situation and adjust risk controls as necessary.
- Anticipate consequences of decisions; if controls do not work, determine the problem, and derive a better solution.
- Adjust actions as the situation changes. Maintain situational awareness.
- Solicit and provide feedback throughout the process.
