## National Interagency Coordination Center <br> Incident Management Situation Report

Friday July 9, 2021- 0730 MDT
National Preparedness Level 4

## National Fire Activity:

Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires: ***
Light (160 fires)
6

Area Command teams committed: 0
NIMOs committed:
0
Type 1 IMTs committed: 5
Type 2 IMTs committed:
Nationally, there are 16 fires being managed under a strategy other than full suppression.
***Uncontained large fires include only fires being managed under a full suppression strategy.

## Link to Geographic Area daily reports.

Link to Understanding the IMSR.
Two MAFFS C-130 airtankers and support personnel each from the $152^{\text {nd }}$ Airlift Wing (Nevada Air National Guard) and one additional from the $146^{\text {th }}$ Airlift Wing (California Air National Guard) have been deployed to McClellan, CA to support wildland fire operations nationally.

One RC-26 aircraft with Distributed Real-Time Infrared (DRTI) capability and support personnel from the $141^{\text {st }}$ Air Refueling Wing (Washington Air National Guard) has been deployed to Reno, NV in support of wildland fire operations.

Predictive Services Discussion: Strong high pressure aloft will build over the southern Great Basin today with much above normal temperatures for California, the Great Basin, Southwest, and Northwest. Elevated to locally critical west winds amid low RH will occur across the eastern Great Basin, southern Wyoming, and northwest Colorado along a cold front. Isolated dry thunderstorms are possible for the Peninsular Range of southern California and the southern Sierra in the afternoon. Isolated to scattered mixed wet/dry thunderstorms are forecast for Colorado, Wyoming, and Montana east of the Divide as well as the Southwest. Heavy rain is forecast along the cold front in the central Plains while the Northeast sees rain from the remnants of Elsa. Alaska will remain cool and moist today, but the driest conditions remain over the eastern Interior.

# Thunderstorm Safety 

Weather - Fire Behavior Category

Thunderstorms cause significant hazards for wildland firefighters, including downbursts. Downbursts can cause extreme fired lightning. When thunderstorm development is likely, lookouts should be aware of the signs.
Approaching thunderstorms may be noted by a sudden reverse in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature. Rain, hail, and lightning occur only in the mature stage of a thunderstorm.
Situation Awareness: Sound waves move at different rates based on atmospheric conditions. Take the storm precautions below as soon as you hear thunder, not when the storm is upon you. Do not resume work in exposed areas until 30 minutes after storm activity has passed.

## Hazard Control:

- Take shelter in a vehicle or building if possible.
- If outdoors, find a low spot away from tall trees, wire fences, utility lines and other elevated conductive objects. Make sure the place you pick is not subject to flooding.
- If in the woods, move to an area with shorter trees.
- If only isolated trees are nearby, keep your distance twice the tree height.
- If in open country, crouch low, with feet together, minimizing contact with the ground. You can use a pack to sit on, but never lie on the ground.
- If you feel your skin tingle or your hair stand on end, immediately crouch low to the ground. Make yourself the smallest possible target and minimize your contact with the ground.
- Don't group together.
- Don't stay on ridge tops, in wide open areas, or near ledges or rock outcroppings.
- Don't operate landline telephones, machinery, or electric motors.
- Don't handle metal hand tools or flammable materials in open containers.
