Predictive Services Discussion: West flow aloft is forecast for most of the West where temperatures will remain above normal with below normal temperatures for the Plains and Southwest. Scattered thunderstorms this morning over southwest Arizona will dissipate before noon. Scattered thunderstorms, most with wetting rain, will develop this afternoon and evening across eastern Nevada, Southwest, Utah, and Colorado. Some of the storms will produce heavy rain with flash flooding possible with the greatest threat over southeast Arizona. Elevated fire weather conditions are forecast for the Sierra Front, Columbia Basin, and east slopes of the Cascades as gap winds increase in the late afternoon and evening combining with low RH. Temperatures over the Interior of Alaska will be cooler today and severe thunderstorms are likely for the upper Midwest.

## Hydration

Firefighter Health \& First Aid

Dehydration is the result of the body trying to regulate its temperature naturally through sweating. Maintaining body fluids is essential for sweating. You must hydrate before, during, and after work.

- Studies conducted on wildland firefighters indicate that during fire suppression activities firefighters need to drink a minimum of one quart of fluid each hour of work.
- Before work, you should take extra fluids to prepare for the heat. Drink one or two cups of water, juice, or a sports drink before work.
- While working, drink at least one quart of fluid per hour. Drink as much as you can during the lunch break. Water is your greatest need during work in the heat.
- Hyponatremia (abnormally low concentration of sodium in the blood) as a result of excessive water intake is a potentially life-threatening complication. It can be prevented when hydration is enhanced by electrolytes, through fluids or food containing sodium and potassium.
- After work, it is important to continue drinking to replace fluid losses. Thirst always underestimates fluid needs, so you should drink more than you think you need.
- Unacclimatized workers lose more salt in the heat, so they need to pay particular attention to salt replacement.
- Don't overdo salt intake. Excessive salt can impair temperature regulation and cause stomach distress, fatigue, and other problems.
- You can assess your hydration by observing the volume, color, and concentration of your urine. Low volumes of dark, concentrated urine or painful urination indicate a serious need for rehydration. Other signs of dehydration include a rapid heart rate, weakness, excessive fatigue, and dizziness.
- Rapid loss of several pounds of body weight is a certain sign of dehydration. Rehydrate before returning to work; working in a dehydrated state can lead to serious consequences, including heat stroke, muscle breakdown, and kidney failure.

## Discussion Points

- What are you doing right now to ensure that you are hydrated?
