Predictive Services Discussion: Isolated dry thunderstorms are possible over eastern Washington, eastern Oregon, northern Idaho, and northwest Montana this morning. This afternoon, isolated to scattered wet and dry thunderstorms are expected across southern and eastern Idaho, western Montana, and northwest Wyoming. Dry and breezy conditions are forecast for the inland Pacific Northwest into northeast California and northwest Nevada. Monsoon thunderstorms will continue today across the Southwest and Four Corners where some storms may produce flash flooding. Near to below average temperatures are forecast for much of the Eastern U.S. with scattered showers and thunderstorms for portions of the Gulf Coast, Northeast, and western Great Lakes. Alaska will see temperatures cool to near average for the Interior today with scattered thunderstorms for the eastern Interior.

\title{
Unfamiliar With Weather and Local Factors \\ Weather - Fire Behavior Category
}

What kinds of questions would you ask of local experts?
Does the operational period plan or Incident Action Plan (IAP) give you adequate weather information? What kinds of weather forecasts are available? What other weather or local information do you look for in the plan?

Can you get information from resources that have been on the fire? What questions will you ask of the crew that you are replacing?

Is there any other way to obtain information? List common sources of information on weather and local factors. Examples include web-based Weather Activity Planner, Point Forecast Matrix, National Oceanic and Atmospheric Administration (NOAA) Internet Briefing.

\section*{To reduce risks:}
- Base all actions on current and expected fire behavior.
- Establish escape routes and safety zones.
- Post lookouts.
- Discuss a fire where you relied on information from the local unit. For example, where your fire knowledge and experience was very different from how they did things - such as in the southeastern United States or Alaska.
- Recognize and report visual indicators (clouds, weather observed, cold front passage, inversion breaking).
