Predictive Services Discussion: - An upper-level shortwave trough is forecast to rotate northward through the Great Basin into the Pacific Northwest and Northern Rockies amid upper-level ridging over the West and western Canada. Moisture will continue to increase northward over the West with scattered to widespread showers and wet thunderstorms in Idaho, western Montana, far eastern Oregon and Washington, much of the Great Basin, western Wyoming, Colorado, and the Southwest. Flash flooding and heavy rainfall are likely. Mixed wet and dry thunderstorms are likely in far northern California into southwest and south-central Oregon and the Sierra. Dry and breezy post-frontal conditions should continue across portions of the northern Plains into western Minnesota and in portions of southern California as the onshore pressure gradient strengthens. Severe storms and heavy rainfall are expected in portions of the eastern Carolinas and southeast Virginia.

Retardant and Water Drop Safety

Aviation Category

Retardant (jell, foam), paracargo, and water drops on a fire are routine events. However, there are risks associated with these missions that can pose serious threats to personnel and equipment. Consider the following for all drops you are coordinating:

- Be aware of the location and flight patterns (final approach, drop zone, exit) of aircraft during drop operations.
- Ensure you have positive contact with the pilot before the drop.
 - Clear all persons, vehicles, and animals from the danger zone prior to the arrival of the aircraft.
 - Beware of streamers or parachutes that do not open.
- Personnel can be injured by the impact of material dropped by aircraft. Clear personnel out of the target area before the drop is conducted. If an individual is caught unaware in a drop zone:
 - Hold hand tools away from your body.
 - Lie face down with hardhat in place and head toward the oncoming aircraft.
 - Grasp something firm to prevent being carried or rolled about by dropped liquid.
 - Do not run unless escape is guaranteed.
 - Get clear of dead snags and tree tops.
 - Be aware of rolling debris below the drop site in steep terrain.
- Use caution when working in an area covered by retardant. Surfaces are slippery.
- Wash the retardant off your skin as soon as possible to prevent irritation.
