Predictive Services Discussion: - An upper high over southern California will strengthen with short-wave ridging extending northward over the Sierra, western Great Basin, and into the inland Pacific Northwest and Northern Rockies between troughing off the West Coast and a short-wave trough exiting the Northern Rockies. Dry and breezy conditions are likely across portions of the northern Plains into Minnesota and in southern California with a stronger onshore pressure gradient. Minimum relative humidity is likely to reach single digits in some of these areas with drier conditions also in northern California, the far western Great Basin, and portions of the inland Pacific Northwest. However, enough moisture will likely remain for isolated to scattered mixed wet and dry thunderstorms in portions of central and eastern Oregon. Wetter more widespread thunderstorms are expected across the Rockies into the eastern and northern Great Basin and Southwest, including heavy rain and flooding.

# Parking Safely on Slopes 

Vehicles/Roads Category

In 2005, three fireline fatalities occurred related to improper parking on slopes. One each involved a water tender, a fire engine, and a command vehicle. In wildland fire operations, we frequently exit vehicles quickly, but it is imperative that anytime a vehicle is left unattended, time is taken to assure it is parked safely and will not present a hazard to ourselves or others.

## Standard operating procedures for parking vehicles safely on slopes are:

- Turn the front wheels uphill or into the inside/embankment.
- Firmly set the emergency brake.
- Put the vehicle in park (if automatic transmission) or in forward gear (if manual transmission); do not leave it in neutral.
- Turn off the engine.
- Chock the wheels. When utilizing chocks, make sure they are on the correct side in reference to the slope. Assure the chocks are approved to hold the weight of the vehicle and will grip on the road surface.
- Be aware of safe parking on slopes during an incident when moving a vehicle frequently. When using engines in pumping operations along a roadway, it is easy to get complacent with procedures. Realize when the vehicle is on a slightly different slope and requires placing chocks differently. It is the driver's responsibility to assure not only that the vehicle is operated safely but is positioned and parked safely.
