Predictive Services Discussion: An upper high will be over southern California and western Arizona today with upper ridging extending through the Great Basin and Northern Rockies. Above normal temperatures are forecast along with minimum relative humidity in the single digits and teens for California, the Great Basin, inland Northwest, and Northern Rockies. An upper low will approach the West Coast with and bring breezy south to southwest winds to southern Oregon, northeast California, and the Sierra Front. Enough moisture will remain for isolated to scattered mixed wet and dry thunderstorms in portions of eastern Oregon, northeast Nevada, southern and central Idaho, Montana, and western Wyoming. Isolated wetter thunderstorms are forecast for southeast Colorado and east of the Continental Divide in New Mexico. Upper ridging over Alaska will keep temperatures above normal today while gusty and dry south winds are forecast for western Minnesota.

# Subjective vs. Objective Hazards <br> Operational Engagement Category 

A popular mountaineering test divides the alpinists' hazards into two distinct types: subjective, which one has direct control over (e.g., condition of the equipment, the decision to turn back) and objective hazards, which are inherent to the alpine environment (e.g., avalanches, rock fall).

Objective hazards are a natural part of the environment. They cannot be eliminated, and one must either:

- Not go into the environment where they exist, or
- Adhere to a procedure where safety from the hazard is assured.

Similarly, the wildland firefighter's hazards are either subjective or objective. Examples of subjective hazards would be working below a dozer constructing fireline or the use of improper techniques while felling a tree. The fireline supervisor has direct control over these types of hazards.

The wildland fire environment has four basic objective hazards: lightning, fire-weakened timber (standing and lying), rolling rocks, and entrapment by running fires. When these hazards exist, the options are:

- Not enter the environment, or
- Adhere to a safe procedure.
- The key to a safe procedure is Lookout(s), Communications(s), Escape Routes, and Safety Zones (LCES).
The nature of wildland fire suppression dictates continuously evaluating and, when necessary, re-establishing LCES as time and fire growth progress.
- Identify subjective or objective hazards of working in the vicinity of or associated with:
- Dozer(s) or Tractor Plows
- Snags
- Helicopters
- Fixed-Wing Aircraft
- Other Engines and Vehicles
- All-Terrain Vehicles (ATVs)
- Oil and Gas Wells and Pipelines
- Power Lines
- Floating Divisions
- Wildland Urban Interface (WUI)
