Predictive Services Discussion: A deep trough will move into the Northwest, with troughing extending into northern California helping to break down the upper-level ridge. A cold front will move into the northern Intermountain West, but temperatures are likely to remain above average, especially east of the Cascades. Elevated to critical conditions are likely across much of the northern Intermountain West and the northern Plains ahead of the approaching cold front. Isolated drier thunderstorms are possible within a corridor stretching from northwest Nevada and southeast Oregon through central Montana with the highest chances in southwest and central Montana. Smoke will begin to get scoured out from northwest to southeast as well across the northwest US. Isolated mixed wet and dry thunderstorms are also possible over the southern Sierra and Peninsular Ranges with monsoon thunderstorms continuing in the Southwest and southern Colorado. Isolated to scattered showers are likely in portions of western Washington and western Oregon with showers possibly moving into northern Montana overnight. Tropical Storm Fred is likely to make landfall tonight in the western Florida Panhandle with strong winds and heavy rainfall.

## Transfer Of Command

Operational Engagement Category

Risks to fireline personnel increase significantly during transfer of command periods regardless of the size or complexity of the incident. There is a high potential for fatalities, serious injuries, or incidents during transfer of command. Be proactive in mitigating the risks by proper implementation of LCES -Lookouts, Communications, Escape Routes, and Safety Zones.

Factors for increased risks to fireline personnel during transition periods include:

- No or poor briefing of incoming personnel.
- Lack of fire weather and behavior information, both forecast and observed.
- Communications: face-to-face briefings may not be possible and radio frequencies may be overextended and/or changing due to the increased demands on the system.
- Initial attack resources may not have checked in and the Incident Commander (IC) may not be aware of the number, type, and location of all resources.
- Location of safety zones and escape routes may not be known and communicated to all resources.
- Not all resources know who is in command.

Mitigation actions to take:

- Lookouts: post and maintain your own lookouts.
- Communications: Maintain existing communications with your own and adjacent resources, as well as your original supervisor, while you are developing communications with incoming adjacent resources and your new supervisor.
- Escape routes and safety zones: Identify escape routes and ensure incoming resources are aware of their locations; be aware that your original escape routes and safety zones may no longer be accessible due to changing fire behavior or your increased distance from them.
- Plan for transitions to occur at the morning briefing.
- Utilize the Incident Response Pocket Guide (IRPG), PMS 461, Briefing Checklist (inside back cover).
