Predictive Services Discussion: An upper-level trough will move over the Northern Rockies and onto the northern Plains with weak upper-level ridging expanding over the West Coast from the northeast Pacific late today. A cold front will push south across the High Plains and Wyoming before stalling in central Nevada and northern Utah. Temperatures will remain below normal across the northern half of the West with above normal temperatures in the Desert Southwest and California. Dry and breezy conditions are likely across southern Idaho into portions of Nevada and Utah east into Wyoming and western Colorado. North to northeast winds are expected across southwest Oregon, and northern California today and tonight with the strongest winds over northern California. Very low daytime relative humidity is expected across much of the Great Basin into non-coastal California with poor overnight recovery. Showers and thunderstorms are forecast to spread across much of the northern Plains and Great Lakes with heavy rain possible in portions of the northern Great Lakes. Isolated monsoonal thunderstorms are likely from eastern Arizona into New Mexico and the southern Colorado Rockies.

The 10 Standard Firefighting Orders

Operational Engagement Category

The orders are arranged according to their importance and grouped in a logical sequence: fire behavior, fireline safety, and organizational control.

Review and consider Standard Firefighting Orders as a part of every shift.

- Did you receive or request an adequate briefing, including weather, current and predicted fire behavior, wind direction, predicted humidity, fuel moisture, and/or local factors?
- Do you have a map of the fire? Are topography, fuel types, and spread direction defined?

The Fire Behavior group addresses conditions the firefighter will encounter – weather, fire status, and fire behavior.

1. Keep informed on fire weather conditions and forecasts.
2. Know what your fire is doing at all times.
3. Base all actions on current and expected behavior of the fire.

- Are you familiar with direction, distance, location, and size of escape routes and safety zones?
- Discuss the need for a lookout, such as extreme fire behavior or a fire located out of your line-of-sight.
- Discuss the importance of situational awareness.

The Fireline Safety group emphasizes personal safety.

4. Identify escape routes and safety zones, and make them known.
5. Post lookouts when there is possible danger.
6. Be alert. Keep calm. Think clearly. Act decisively.

- Review the importance and means of sharing tactical decisions and resource movement.
- Review other factors influencing potential changes in tactics, which could affect control of your forces.

The Organizational Control group is centered around tactical decisions.

7. Maintain prompt communications with your forces, your supervisor, and adjoining forces.
8. Give clear instructions and be sure they are understood.
9. Maintain control of your forces at all times.

- After you have considered, discussed, and acted on the previous nine orders:

10. Fight fire aggressively, having provided for safety first.
