Predictive Services Discussion: An upper high will develop over the Sonoran and Mojave Deserts as upperlevel ridging strengthens over the West. An upper high will begin to weaken over the Lower Mississippi Valley with an upper-level trough tracking east across the northern Plains into the Great Lakes. Temperatures will warm to above normal across the West, especially from California into the Northwest. An onshore flow will likely result in some gusty Cascade gap winds with showers in western Washington. Dry and breezy conditions are likely near a surface front in southeast Idaho into central and southern Wyoming. Downslope flow across portions of Montana will result in locally elevated winds and low relative humidity as well. Mid and upper-level clouds may mitigate some of the fire weather concerns in portions of the Northwest into the Northern Rockies. Overall, relative humidity will be very low across much of the West with poor overnight recovery for mid-slopes and ridges. Isolated to scattered monsoon thunderstorms are likely in eastern Arizona, much of New Mexico, and portions of southern Colorado. Isolated thunderstorms are possible in northeast Minnesota as well.

Chainsaw Safety<br>Felling Safety Category

Chainsaw safety is every saw operator's job.

- Always wear proper personal protective equipment (PPE) when handling or working around chainsaws.
- Eye protection - approved goggles or safety glasses.
- Hearing protection - earplugs or muffs.
- Helmet.
- Chainsaw Chaps - proper size and length.
- Gloves - proper size.
- Long sleeve shirt - no loose sleeves.
- Leather boots - no loose boot laces.

Take the time to inspect the chainsaw before operating the saw.

- Check the chain and bar - sharpness of chain, bar seated correctly.
- Check the bolts and screws all around the saw - no missing screws or bolts.
- Check the casing of the saw - no cracked or missing plastic.
- Felling axe and wedges in good condition.
- Saw gas and bar oil in sufficient quantities to meet objectives.
- Basic saw maintenance tools on site and specific to saw in use.
- Review fuel geysering indicators/potential.

Make sure you're aware of your surroundings while operating the chainsaw.

- Look for and anticipate people working in your area - the chainsaw operator is responsible for controlling the cutting area and communicating with others in the cutting area.
- Look for any snags or overhead hazards in your area - maintain recommended spacing of falling teams or others working in the cutting area.
- Establish consistent communications with spotters/swampers - always minimize personnel working directly at the stump or in the felling area.
- Are there other risk factors that increase the complexity of the job - loose soils, rocky ground, steep terrain, weather factors or poor visibility, tree condition, others?

Complete a personal Risk Assessment to determine if you are comfortable completing the task at hand - don't let job performance pressure force you in over your skill level.

- Proper training and certification level for personnel running saws and assisting with saw operations.
- Describe your medical response plan and how it is implemented, including extricating a severe injury at the worksite.
- If you are not comfortable falling the tree, walk away. Notify your supervisor and mitigate the safety issues or turn down the assignment.
