Jakes Gulch, Sawtooth NF, USFS. Two miles west of Vienna, ID. Timber and brush. Active fire behavior with single tree torching, uphill runs and smoldering. Structures threatened. Area, road and trail closures in effect. Reduction in acreage due to more accurate mapping.

Oak Grove, Dixie NF, USFS. Twenty miles northeast of St. George, UT. Timber, brush and slash. Moderate fire behavior with isolated torching. Area, road and trail closures in effect.

Boundary, Salmon-Challis NF, USFS. Twenty-four miles northwest of Stanley, ID. Timber, short grass and brush. Active fire behavior with group torching, wind-driven runs and short-range spotting. Structures threatened. Area, road and trail closures in effect. Last narrative report unless significant activity occurs.

Predictive Services Discussion: An upper high will be over the Four Corners with ridging over much of the West and troughing over the eastern US. Elevated to locally critical fire weather conditions are likely from northeast California through southeast Oregon, much of Montana and the Great Basin, into Wyoming and the western Dakotas under stronger west-southwest flow aloft. Mid-level moisture will also stream northward into the Sierra and Great Basin this afternoon. Isolated mixed wet/dry thunderstorms are likely Peninsular Ranges of southern California north through the Sierra into southwest and south-central Oregon, stretching east into the western and northern Great Basin. Thunderstorms are likely to continue overnight, and coverage may increase across northern California, central/eastern Oregon, northwest Nevada, southeast Washington, and into Idaho. Strong outflow winds are likely with some of these storms with a few storms producing heavy rain. However, given the dry fuels, faster storm motions, and scattered coverage of lightning, potential will increase for large new fires. Finally, plume-dominated wildfire behavior and pyrocumulonimbus development are possible on active large fires in the Sierra into northeast California, central Oregon, and central Idaho.

Building Fireline Downhill With Fire Below<br>Operational Engagement Category

As a rule, construct line moving uphill. Many firefighters have lost their lives attacking wildland fires from above. If there is no practical alternative to constructing line downhill, proceed only after weighing the following considerations:

- Has the area been scouted for fire perimeter and behavior? Discuss what you need to know about the fire perimeter and fire behavior before building fireline downhill with fire below.
- Will the wind direction be at your back? Will it stay at your back? Talk about how winds can change when you are on a slope (e.g., time of day, upslope and downslope breezes, etc.).
- Is the area free of chimneys and gullies? How would you negotiate your line location if there were chimneys and gullies below where you want to work?
- Are there adequate safety zones and escape routes? How do you maintain adequate safety zones and escape routes as you progress downhill?
- Can you complete the burnout downhill as you work, providing an anchor point and safety zones? Discuss how you decide to carry the burnout with you or wait until you have tied into a fireline down below.
- Have lookouts been posted? What should they be monitoring?
- Have you established good communications? What are some of the dangers of poor communication with lookouts and crews working towards you? Describe the benefits of maintaining good communications.
- Can the line be completed and burned out before the fire reaches it? Discuss how this would affect where you locate the line.
- Do you have adequate resources to complete the assignment? What additional resources might you need to safely take on an assignment that includes building fireline downhill with fire below? How many resources do you want to engage?
- Is aerial support available if needed? What benefits can aerial resources provide? What might be an added danger from aerial resources in this type of situation (common denominators)?
- Has everyone been briefed on the assignment, fire behavior, weather, communications, escape routes and safety zones, hazards, and tactics? Discuss who might provide this briefing, where they would receive their information, and where and when it might occur.
