Predictive Services Discussion: Ridging aloft will continue across the Southwest, southern Plains, and Southeast. A mid-level short-wave will move into the Great Lakes with upper ridging in the Northwest and Northeast. Tropical Storm Nicholas will continue to move slowly through southeast Texas. Very hot and dry conditions will continue over southern California, the Southwest, southern Great Basin, and central and southern Plains, with above normal temperatures spreading into the Northwest, Northern Rockies, and Northeast. Breezy and dry conditions are likely across the eastern Great Basin, central Rockies, Southwest, and southern Plains. The winds will be westerly, except across the Plains where winds will be from the south. Locally gusty west winds are possible in the Cascade Gaps of Washington, the Columbia Basin, and near and east of the Divide in north-central Montana. Isolated to scattered thunderstorms are possible across Colorado and New Mexico east of the Divide. Heavy rain and potential flooding will continue across much of southeast Texas and spread into Louisiana associated with Nicholas. Light rain will move into northwest Washington with wetting rain likely west of the northern Cascades.

Frequent Spot Fires Across the Line<br>Weather - Fire Behavior Category

This watch-out situation clearly indicates how much potential a fire has for rapid, uncontrolled growth. Consider the following questions if you are getting spot fires across your line:

- Can you handle increased spotting?

List some ways you can keep ahead of spot fires (gridding the green, lookouts, etc.).

- What is your Probability of Ignition (PIG)? Is it increasing or decreasing?
- Do you have a plan for long-range spotting? In what fuel type and under what conditions is it likely? What planning would account for handling long-range spotting?
- Is help available if necessary? What kinds of resources will you have in place, or order, to handle spot fires?
- If fire behavior increases, is your position still defensible? Discuss what type of action you might take if a spot fire takes off.
- Do you have more than one safety zone in case access to one is cut off? Describe how you might utilize multiple safety zones.
- Do the primary lookouts have a good view of the situation?

Discuss who might be acting as a lookout (crew member, air resources, supervisors, etc.) and how you will get accurate information from that person. Are you relying on an air attack that is busy with airtankers?

- Where are you in the burning period? Talk about how your tactics for finding spot fires early in the day to later into the evening may vary. Review PIG and what it can tell you about spotting potential.
- To reduce the risk, are you ready to retreat?

Keep your guard up even if spotting has not occurred for a few hours. Review incidents where you have had frequent spot fires and share what you have learned about controlling them.
