Predictive Services Discussion: Upper-level troughing will move into the northern Plains with another, deeper trough approaching the Pacific Northwest. A weak upper low will be off the southern California coast with upperlevel ridging over the Southwest and southern Plains stretching northeastward into the Great Lakes, Northeast, and Mid-Atlantic. A cold front will move through the northern Plains into the western Great Lakes, but stall across the northern Great Basin into southern Wyoming. Dry and breezy conditions are expected for the Great Basin into the central Rockies, Four Corners, and central Plains. Dry and breezy conditions are also likely for the Sierra Front, the mountains, gaps, and deserts of southern California, and eastern Montana. Showers and thunderstorms with heavy rain and potential flooding will continue across the northern Gulf Coast with the remnants of Nicholas. Isolated thunderstorms are possible near the Continental Divide in the Rockies through southern New Mexico and into southeast Arizona. Showers and thunderstorms, some possibly severe are likely ahead of a cold front in the northern Plains into Minnesota.

## NFDRS PocketCards

Weather - Fire Behavior Category

The National Fire Danger Rating System (NFDRS) PocketCard is a tool for field personnel to locally track fire potential throughout the season. It is based on historical weather and fire occurrence for a localized area. The PocketCard displays a general assessment of the fire potential and identifies combinations of local weather and fuel conditions that might contribute to severe fire behavior.

## The PocketCard provides:

- A general indicator of the potential fire danger for a given rating or protection area.
- A graph showing the trend and status of the current year's fire season.
- A comparison of current year conditions to historical worst and average conditions.
- Fire danger values related to past large or problem fires.
- Critical local thresholds for temperature, humidity, wind speed, and fuel moistures associated with large or notable fires.

## Discuss the following ways to use the PocketCard:

- Use it primarily before fires occur or before arriving at a fire. It is also useful during initial fire size-up, initial attack, and extended attack.
- Use it to learn critical local area thresholds that predict the potential for extreme fire behavior. Be aware that these critical thresholds can occur earlier or later in the season.
- Use it to compare current and predicted local fire danger to historical local fire danger for enhanced situation awareness.
- Use it to track daily fire danger indices that gauge the potential for weather and fuels to support extreme fire behavior, as well as affect the difficulty of control.
- Use it to supplement local experience.
- Use it as a point of reference for firefighters not familiar with the area represented by the card.
- When you receive a fire assignment outside your local area, visit the National PocketCard website, https://famit.nwcg.gov/applications/WIMS/PocketCards, where PocketCards are filed by geographic area.
- Put it in the pocket of all your firefighters and keep one in each fire vehicle.
- Post it in dispatch. Use them in briefings. Provide them to incoming crews.
- Do not use the PocketCard for site-specific fire behavior predictions, fireline actions, or without an interpretive briefing.
- Review definitions and implications of Energy Release Component (ERC) and Burning Index (BI) values.
