Predictive Services Discussion: A strong upper-level trough will continue to move south and east into the Northwest, northern California, and Northern Rockies. A strong Pacific cold front will move through the Northern Rockies ahead of the trough and extend into the northern Great Basin and central California. Ridging will continue over the Southwest into the northern Plains, Great Lakes, and Northeast. Above normal temperatures are forecast for much of the Rockies, Southwest, and Plains. Much below normal temperatures will expand across most of the Northwest into northern California and the Northern Rockies behind the strong cold front. Dry and windy conditions are expected ahead of the cold front from northeast California and the eastern Sierra extending northeast through southern and central Idaho, southwest Montana, northern Wyoming, and onto the northern High Plains. Dry and breezy conditions are expected for the southern Sierra, Transverse and Peninsular Ranges, and deserts of southern California as well. Gusty winds are also likely in portions of the northern Plains into western Minnesota.

Precipitation, including potentially heavy rain, will move southward along the Pacific Northwest coast into southwest Oregon and northwest California. Precipitation will also move into the interior Northwest, Idaho Panhandle, and northwest Montana. Much colder air will move in behind the front with snow across the higher elevations of the Cascades, interior Northwest, and Idaho Panhandle above 70008000 feet. Isolated to scattered thunderstorms are likely over Arizona, the eastern Great Basin, western Wyoming, and western Colorado, with rain continuing across the Southeast.

Downhill Fireline Construction Checklist
Operational Engagement Category

Downhill fireline construction is hazardous in steep terrain, fast-burning fuels, or rapidly changing weather. Downhill fireline construction should not be attempted unless there is no tactical alternative. When building downhill fireline:

- Crew supervisor(s) and fireline overhead must discuss assignments prior to committing personnel. Qualified, responsible overhead individuals such as a Task Force Leader (TFLD) or an Incident Commander Type 4 (ICT4) at minimum, will stay with resources until the job is completed.
- Decisions about downhill fireline construction will be made only after proposed fireline has been scouted by supervisor(s) of involved crew(s).
- Lookouts, Communications, Escape Routes, and Safety Zones (LCES) will be coordinated for all personnel involved. This includes verifying:
- Crew supervisors are in direct contact with lookout(s) who can see the fire.
- Communication is established between crews.
- Rapid access to safety zones is ensured in case fire crosses below crews.
- Direct attack will be used whenever possible; if not possible, the fireline should be completed between anchor points before being fired out.
- Fireline will not lie in or adjacent to a chute or chimney.
- Starting point will be anchored for crews building fireline down from the top.
- Bottom of the fire will be monitored; if the potential exists for the fire to spread, action will be taken to secure the fire edge.
- Before carrying fire with you, ensure it can be done safely.
