# National Interagency Coordination Center Incident Management Situation Report <br> Tuesday, September 21, 2021 - 0730 MDT <br> National Preparedness Level 4 

National Fire Activity:
Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires: ***
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:

Light (69 fires)
0 1 5108

17

Nationally, there are 34 fires being managed under a strategy other than full suppression.
***Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.
Link to Understanding the IMSR.
Two hundred twenty-five soldiers from the 23rd Brigade Engineer Battalion and 2-3 Infantry Battalion based out of Joint Base Lewis-McChord are deployed in support of the Dixie Fire.

One MAFFS C-130 airtanker and support personnel each from the $152^{\text {nd }}$ Airlift Wing (Nevada Air National Guard), three MAFFS from the 302 ${ }^{\text {nd }}$ Airlift Wing (Colorado Air Force Reserve), two MAFFS from the $153^{\text {rd }}$ Airlift Wing (Wyoming Air National Guard) and two from the $146{ }^{\text {th }}$ Airlift Wing (California Air National Guard) have been deployed to McClellan, CA to support wildland fire operations nationally.

One RC-26 aircraft with Distributed Real-Time Infrared (DRTI) capability and support personnel from the 141st Air Refueling Wing (Washington Air National Guard) and one RC-26 aircraft with Distributed Real-Time Infrared (DRTI) capability and support personnel from the 162nd Operations Group (Arizona Air National Guard) have been deployed to Sacramento, CA in support of wildland fire operations. Also supporting these aircraft are eight ground controllers from multiple U.S. Air National Guard squadrons.

Two fire suppression crews from Quebec, Canada are supporting fire suppression efforts in Washington State.

Predictive Services Discussion: The upper-level trough will continue moving east across the Plains into the Great Lakes and gradually deepen into the southern Plains and Lower Mississippi Valley with an upper high shifting off the Northeast coast. A cold front will push south through Texas and into the western Gulf of Mexico and Appalachians by tonight. Upper-level ridging will be over the West, but another upper-level trough will approach the Pacific Northwest tonight and begin to displace and break down the ridge, with showers possibly moving into western Washington overnight. Offshore winds will linger across portions of the Coast Ranges and Sierra in northern and central California this morning. Additionally, lighter offshore winds are expected to continue across portions of southern California. Temperatures will warm to above normal across much of the West with low relative humidity as well. Showers and thunderstorms are likely along and ahead of the cold front stretching from south Texas into Michigan, with heaviest most widespread precipitation forecast from the western Ohio Valley into Michigan.

# Proper Use of Trigger Points 

Weather - Fire Behavior Category

Accurate situation awareness (SA) requires a constant reassessment of conditions (existing and potential) that may impact the safety and effectiveness of tactics. Monitor for the 18 Watch Out Situations and establish trigger points (in the form of operational or environmental limits) ahead of time.
Remember, trigger points are not decision-makers but serve as predetermined cues to prompt you to reevaluate the current and potential situation and its associated risks. They help you to determine and implement the proper course of action.

The following items are considerations in your planning and discussion.

- Use trigger points for preplanning. Do not wait until you are in the wrong place at the wrong time - with no time.
- Trigger points should be based on measurable factors such as:
- Relative Humidity (RH).
- Winds.
- Fire behavior.
- Topographical boundaries.
- Time constraints/time of day.
- Time/distance to safety zones.
- Loss of suppression resources.
- Other operational considerations (e.g., firefighter fatigue, loss of lookouts or communication, weather change).
- As you approach predetermined trigger points, go through the Risk Management Process to help you decide if a change in tactics is required:
- Identify hazards.
- Assess hazards.
- Develop controls and make risk decisions.
- Implement controls.
- Supervise and evaluate.
- Consider the following command/leadership responsibilities when changing tactics:
- Communicate the changes to your subordinates, as well as to adjacent forces and up the chain of command.
- Account for all your people.
- Make sure everyone knows and follows the new plan.
